

Darcy / ID calibration / Sparse forward / sample 1000

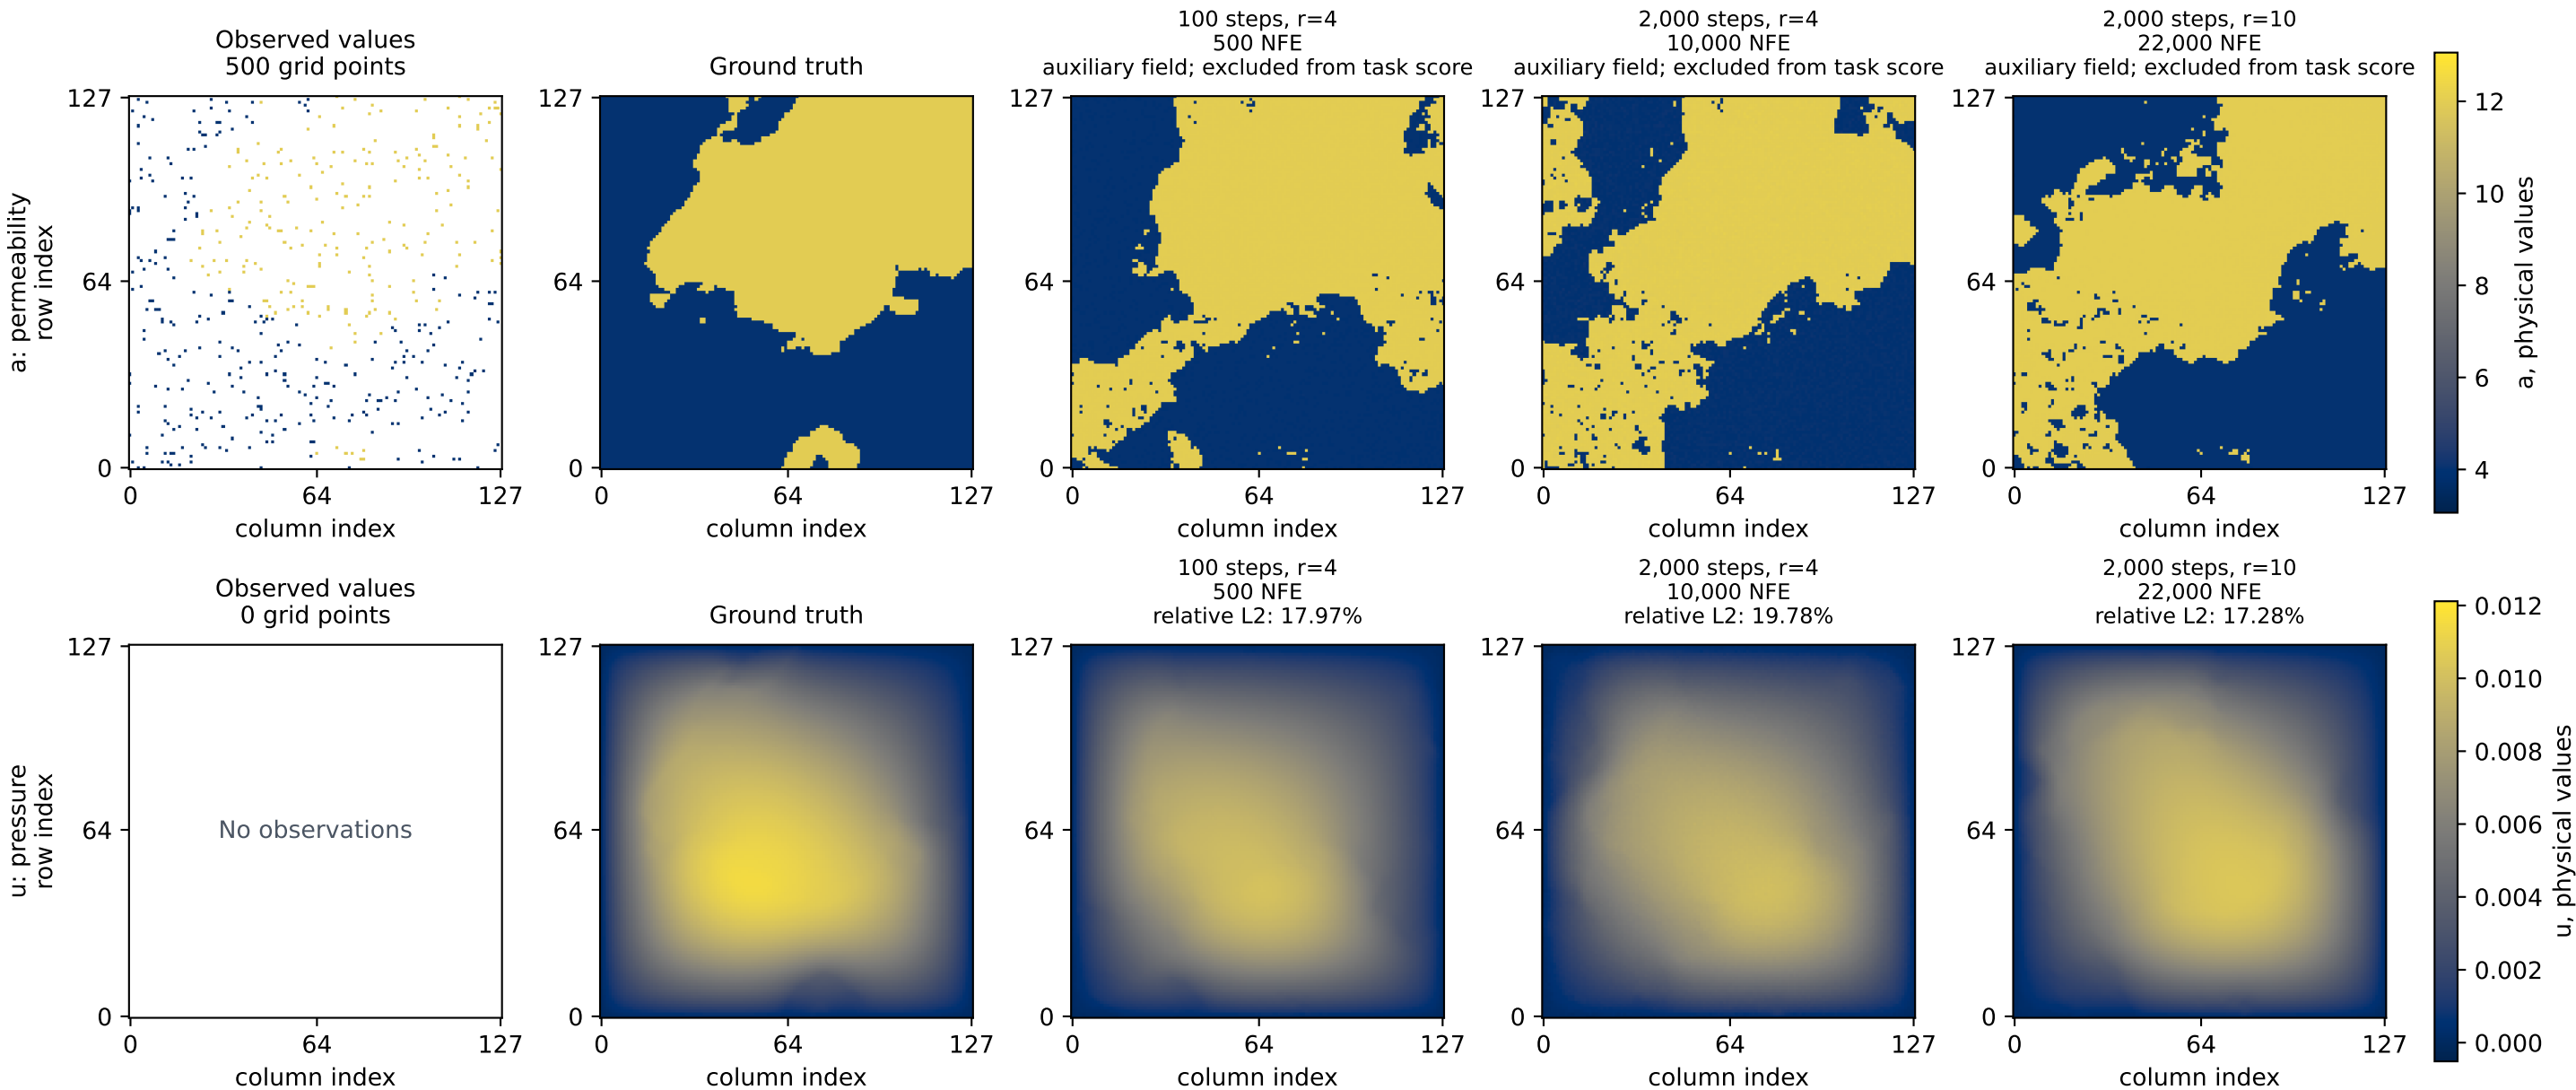

Same 8 calibration cases, seed and observations across configurations. One shared color scale per field across all pages; no image interpolation.
RePaint r is the number of extra visits. This is an exploratory diagnostic, not a formal-main result.

Darcy / ID calibration / Sparse forward / sample 1001

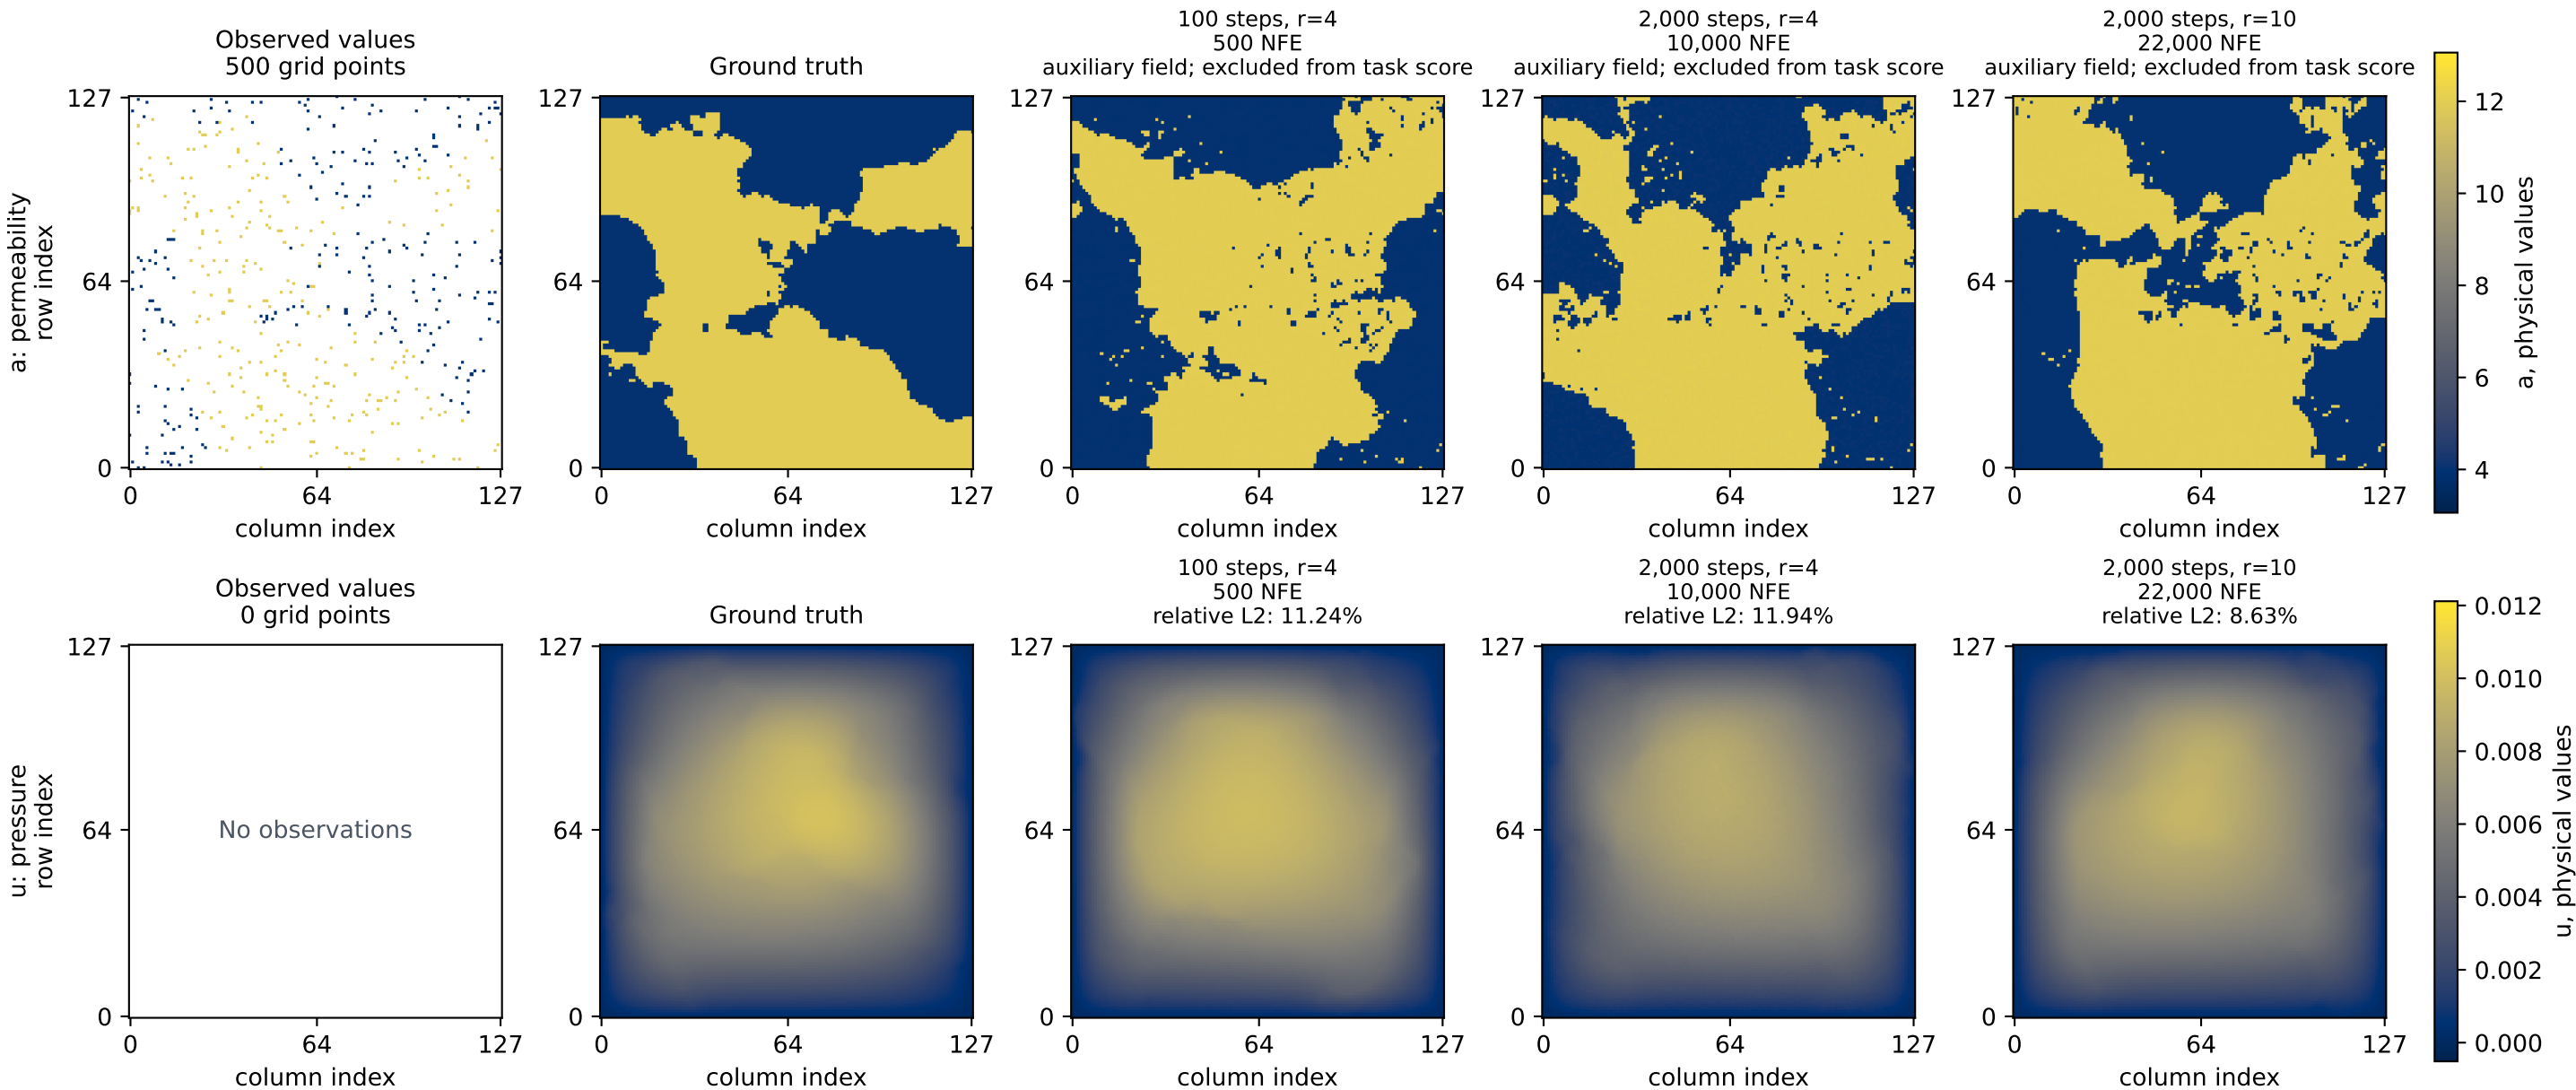

Same 8 calibration cases, seed and observations across configurations. One shared color scale per field across all pages; no image interpolation.
 RePaint r is the number of extra visits. This is an exploratory diagnostic, not a formal-main result.

Darcy / ID calibration / Sparse forward / sample 1002

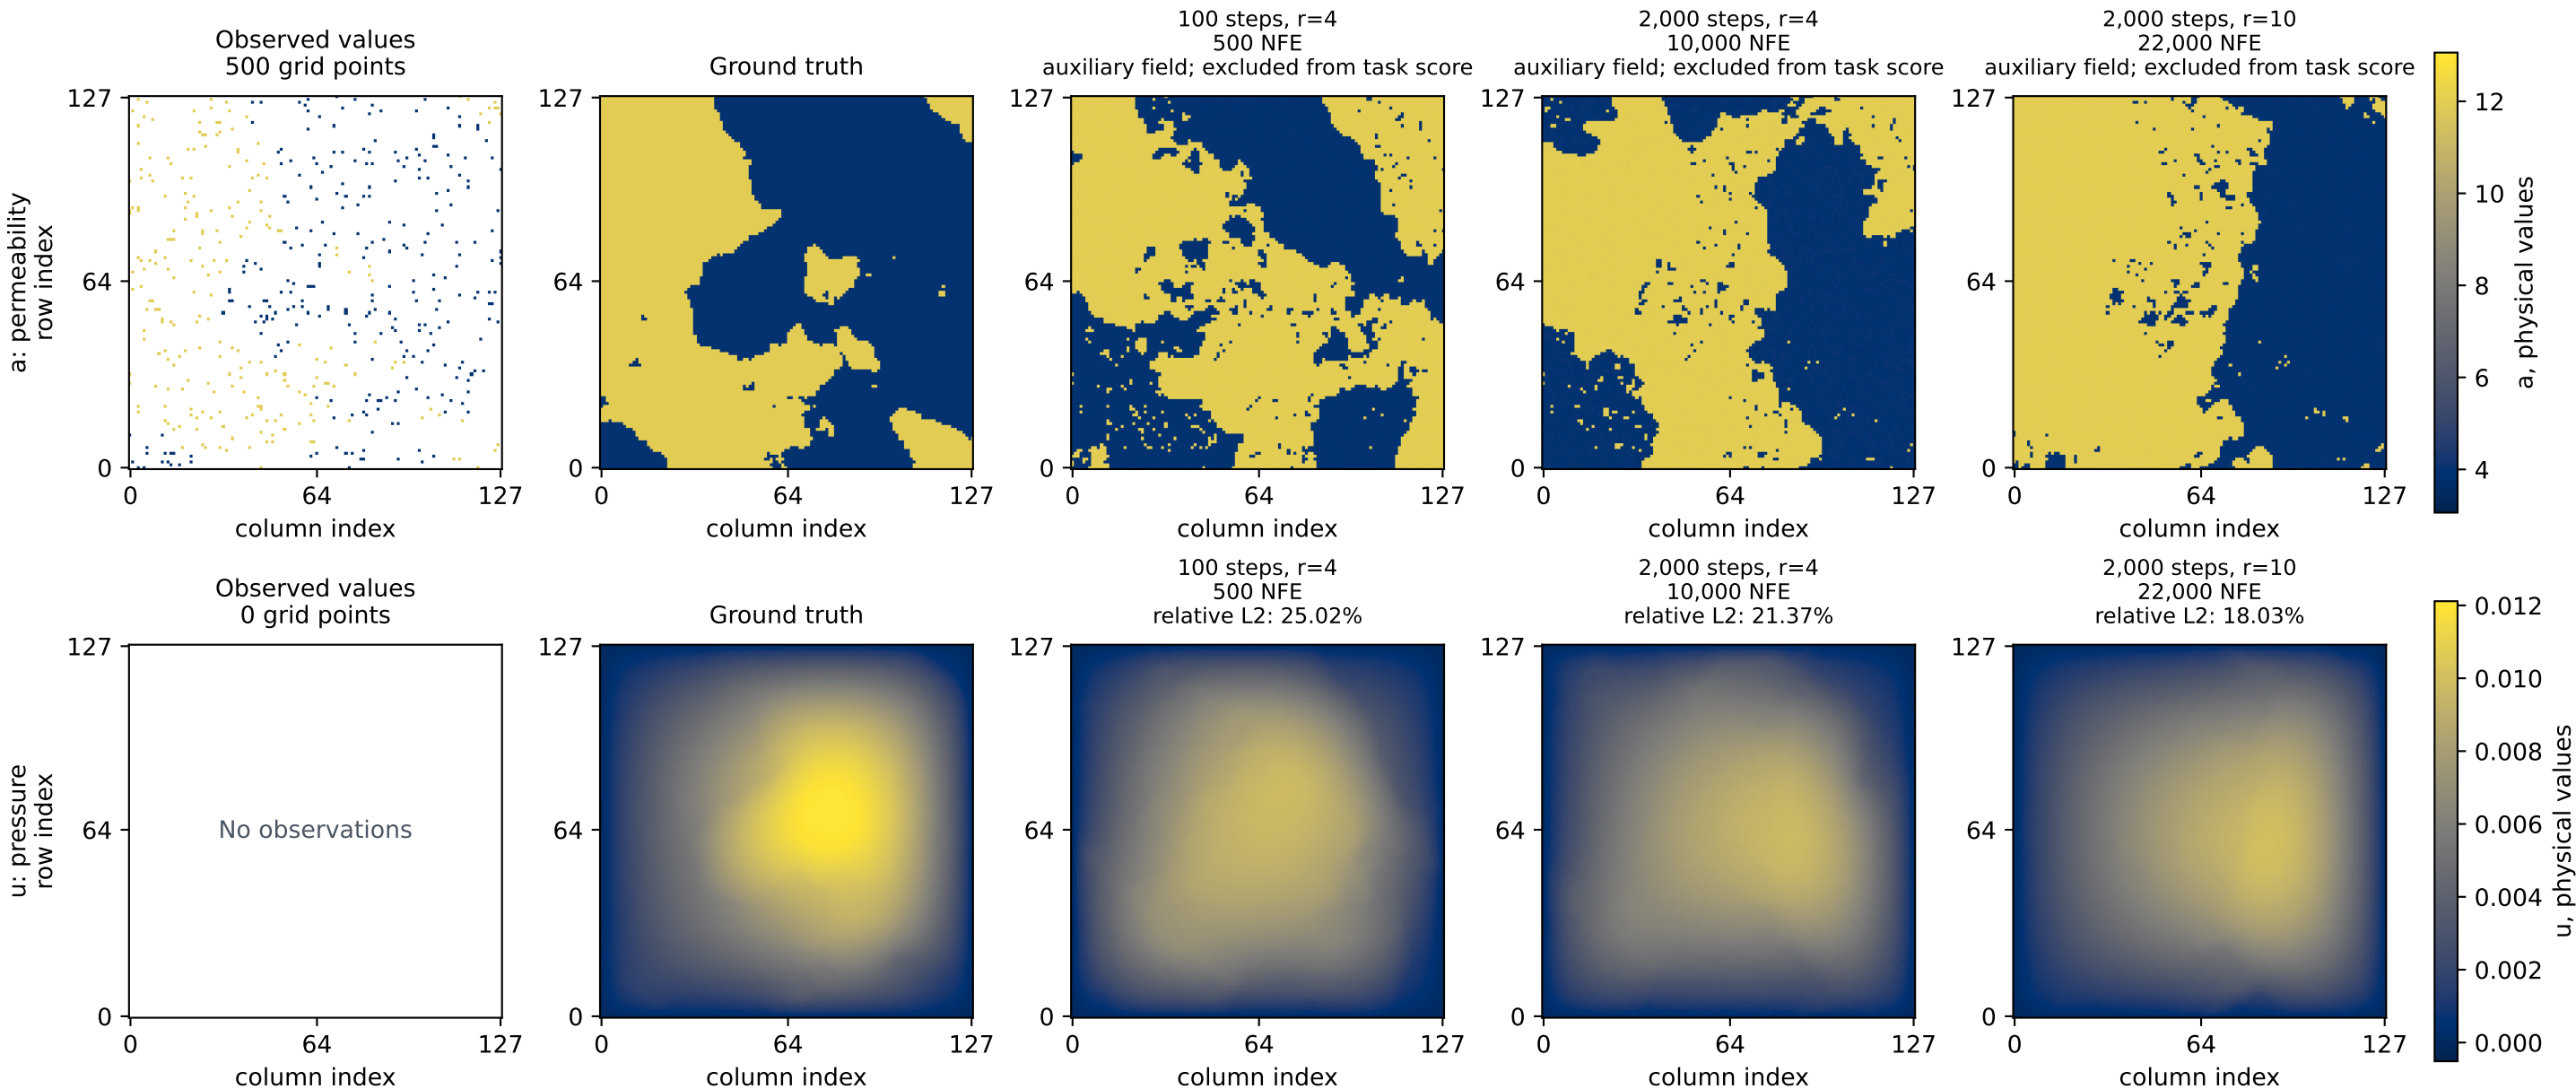

Same 8 calibration cases, seed and observations across configurations. One shared color scale per field across all pages; no image interpolation.
 RePaint r is the number of extra visits. This is an exploratory diagnostic, not a formal-main result.

Darcy / ID calibration / Sparse forward / sample 1003

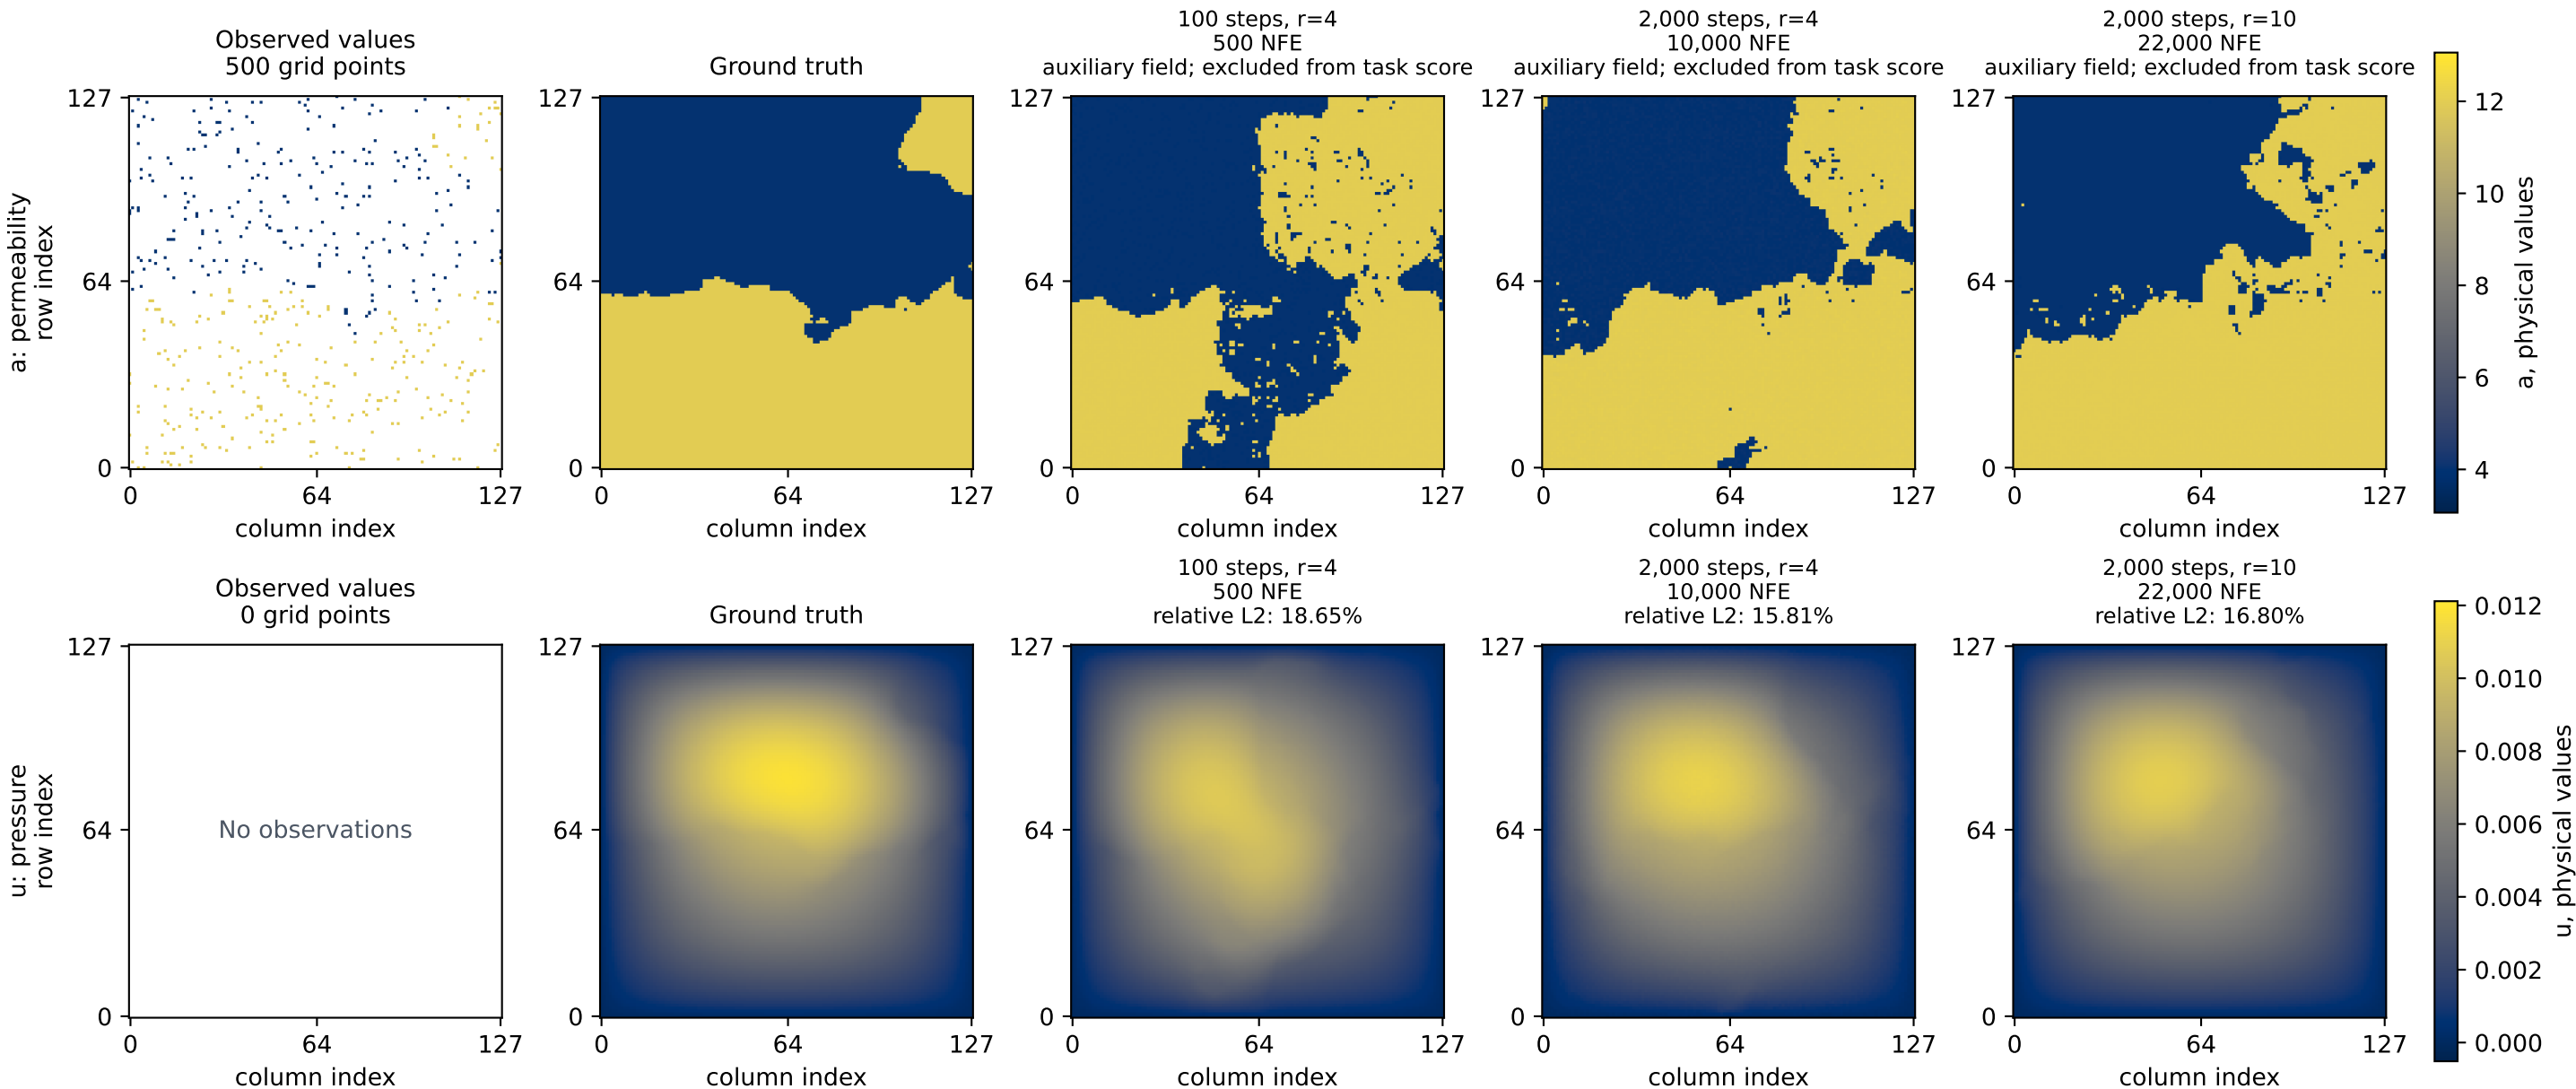

Same 8 calibration cases, seed and observations across configurations. One shared color scale per field across all pages; no image interpolation.
 RePaint r is the number of extra visits. This is an exploratory diagnostic, not a formal-main result.

Darcy / ID calibration / Sparse forward / sample 1004

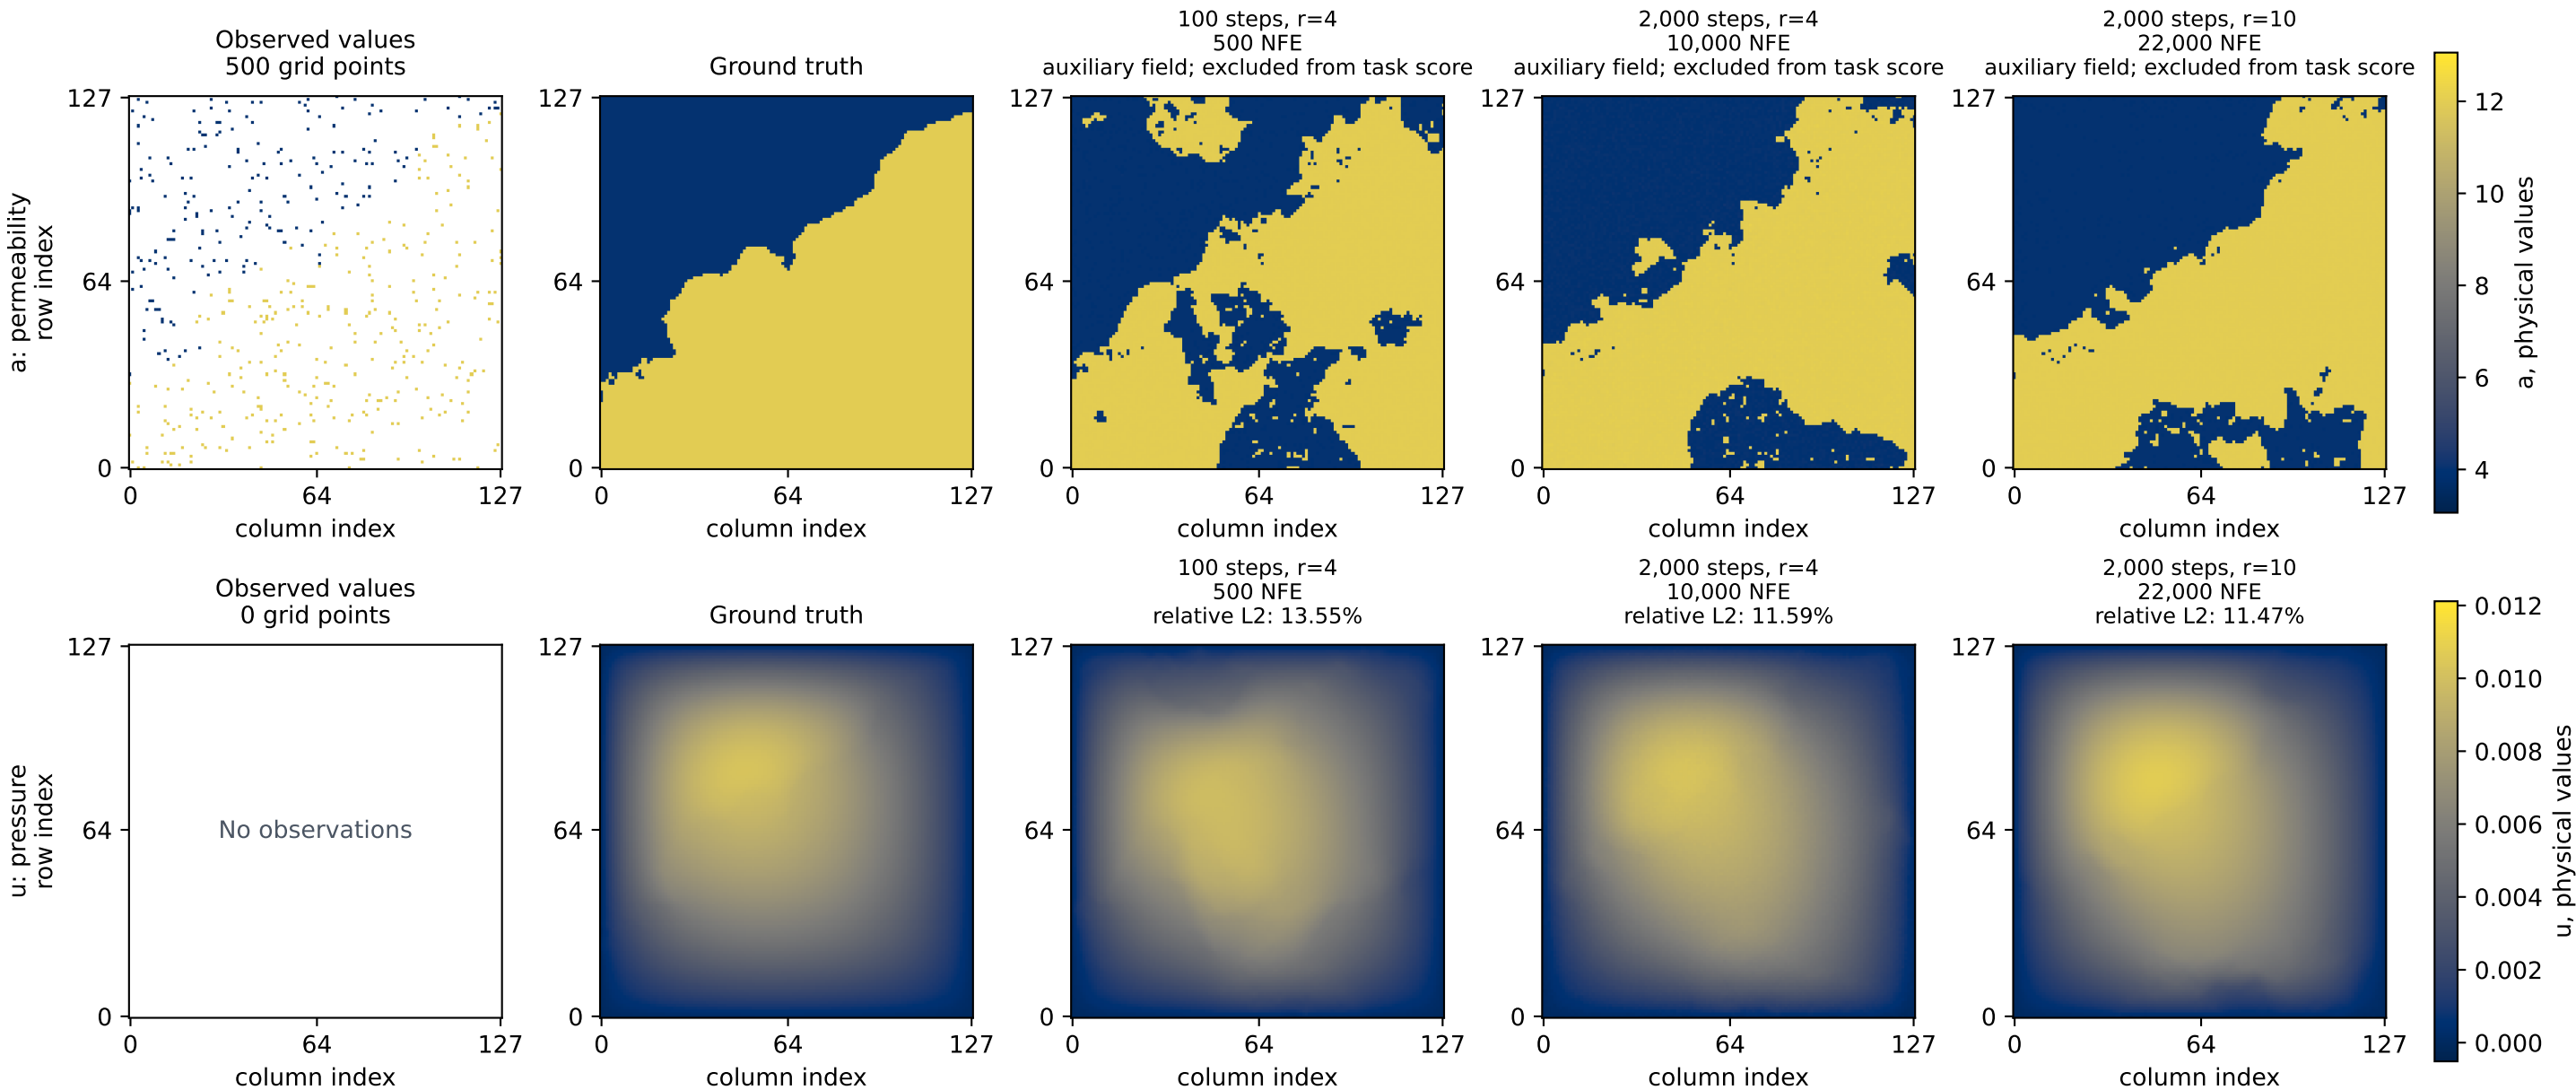

Same 8 calibration cases, seed and observations across configurations. One shared color scale per field across all pages; no image interpolation.
 RePaint r is the number of extra visits. This is an exploratory diagnostic, not a formal-main result.

Darcy / ID calibration / Sparse forward / sample 1005

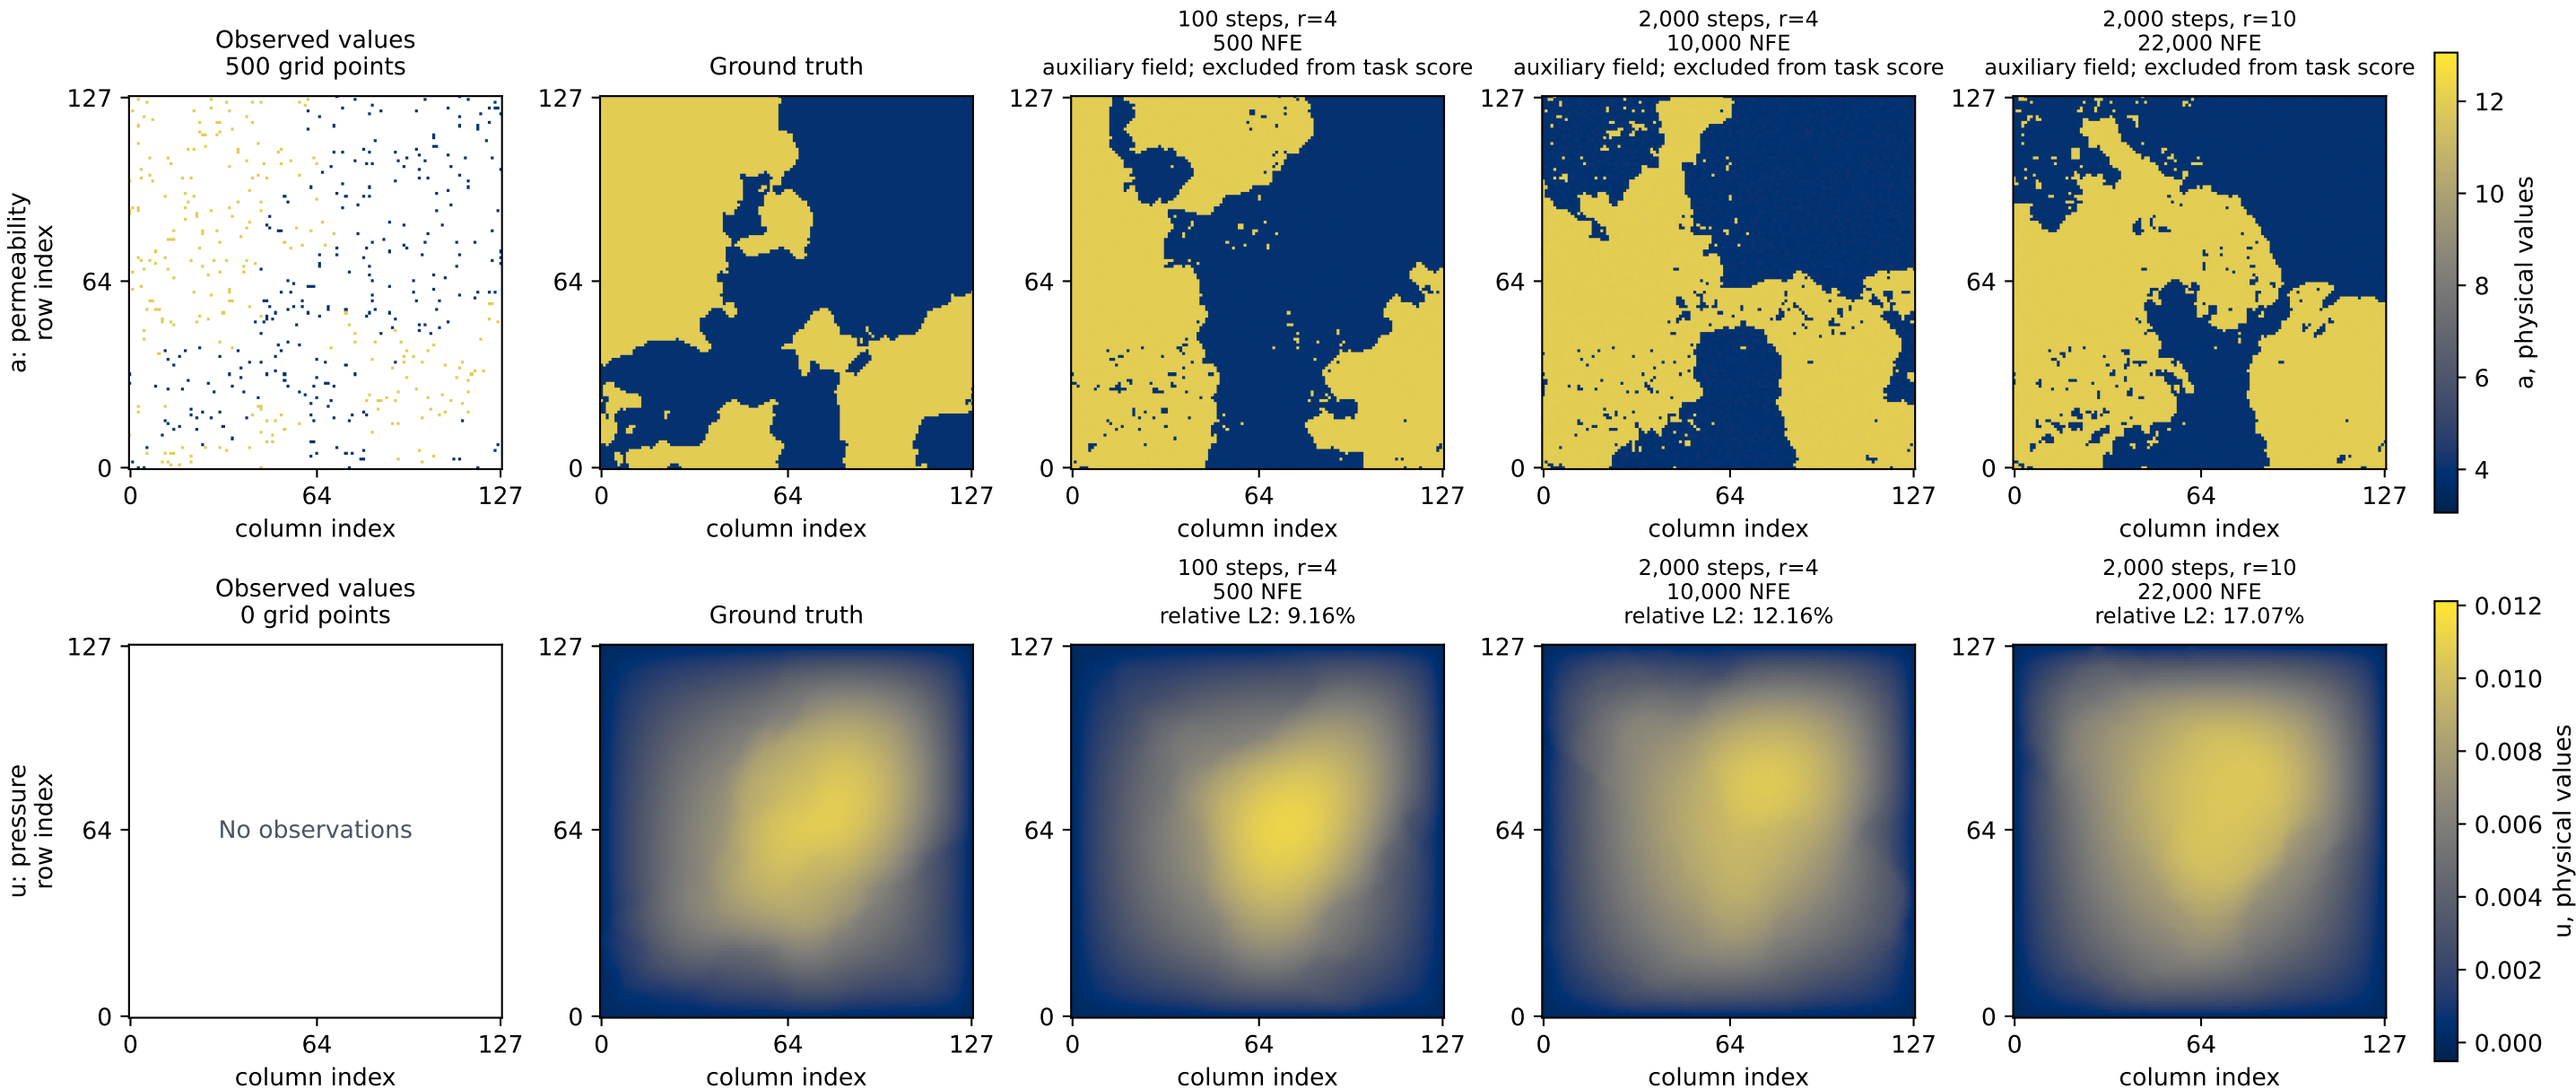

Same 8 calibration cases, seed and observations across configurations. One shared color scale per field across all pages; no image interpolation.
 RePaint r is the number of extra visits. This is an exploratory diagnostic, not a formal-main result.

Darcy / ID calibration / Sparse forward / sample 1006

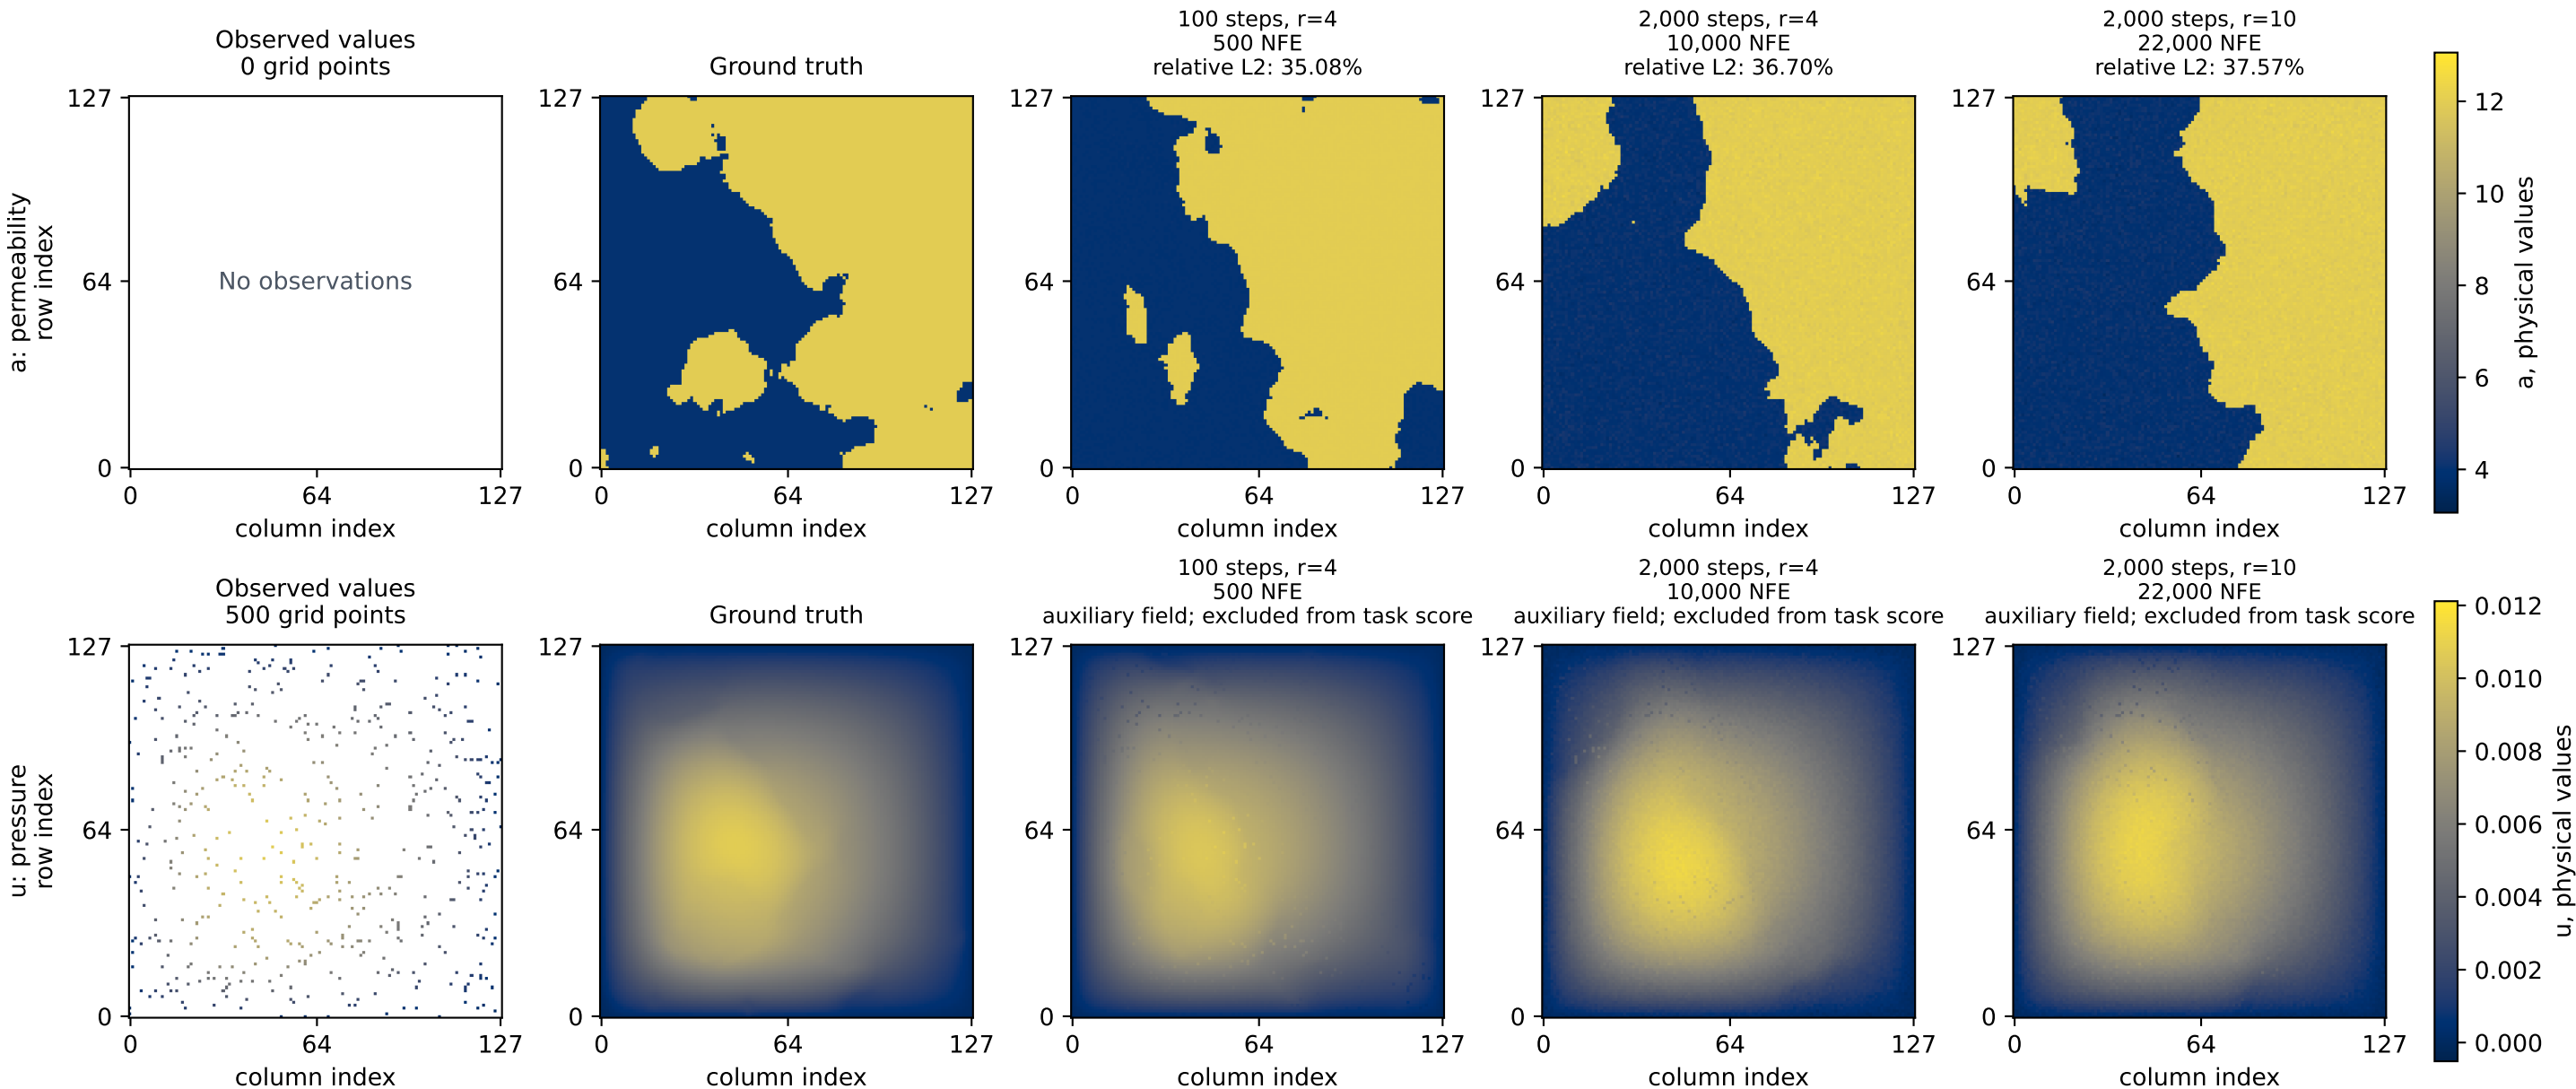

Same 8 calibration cases, seed and observations across configurations. One shared color scale per field across all pages; no image interpolation.
 RePaint r is the number of extra visits. This is an exploratory diagnostic, not a formal-main result.

Darcy / ID calibration / Sparse forward / sample 1007

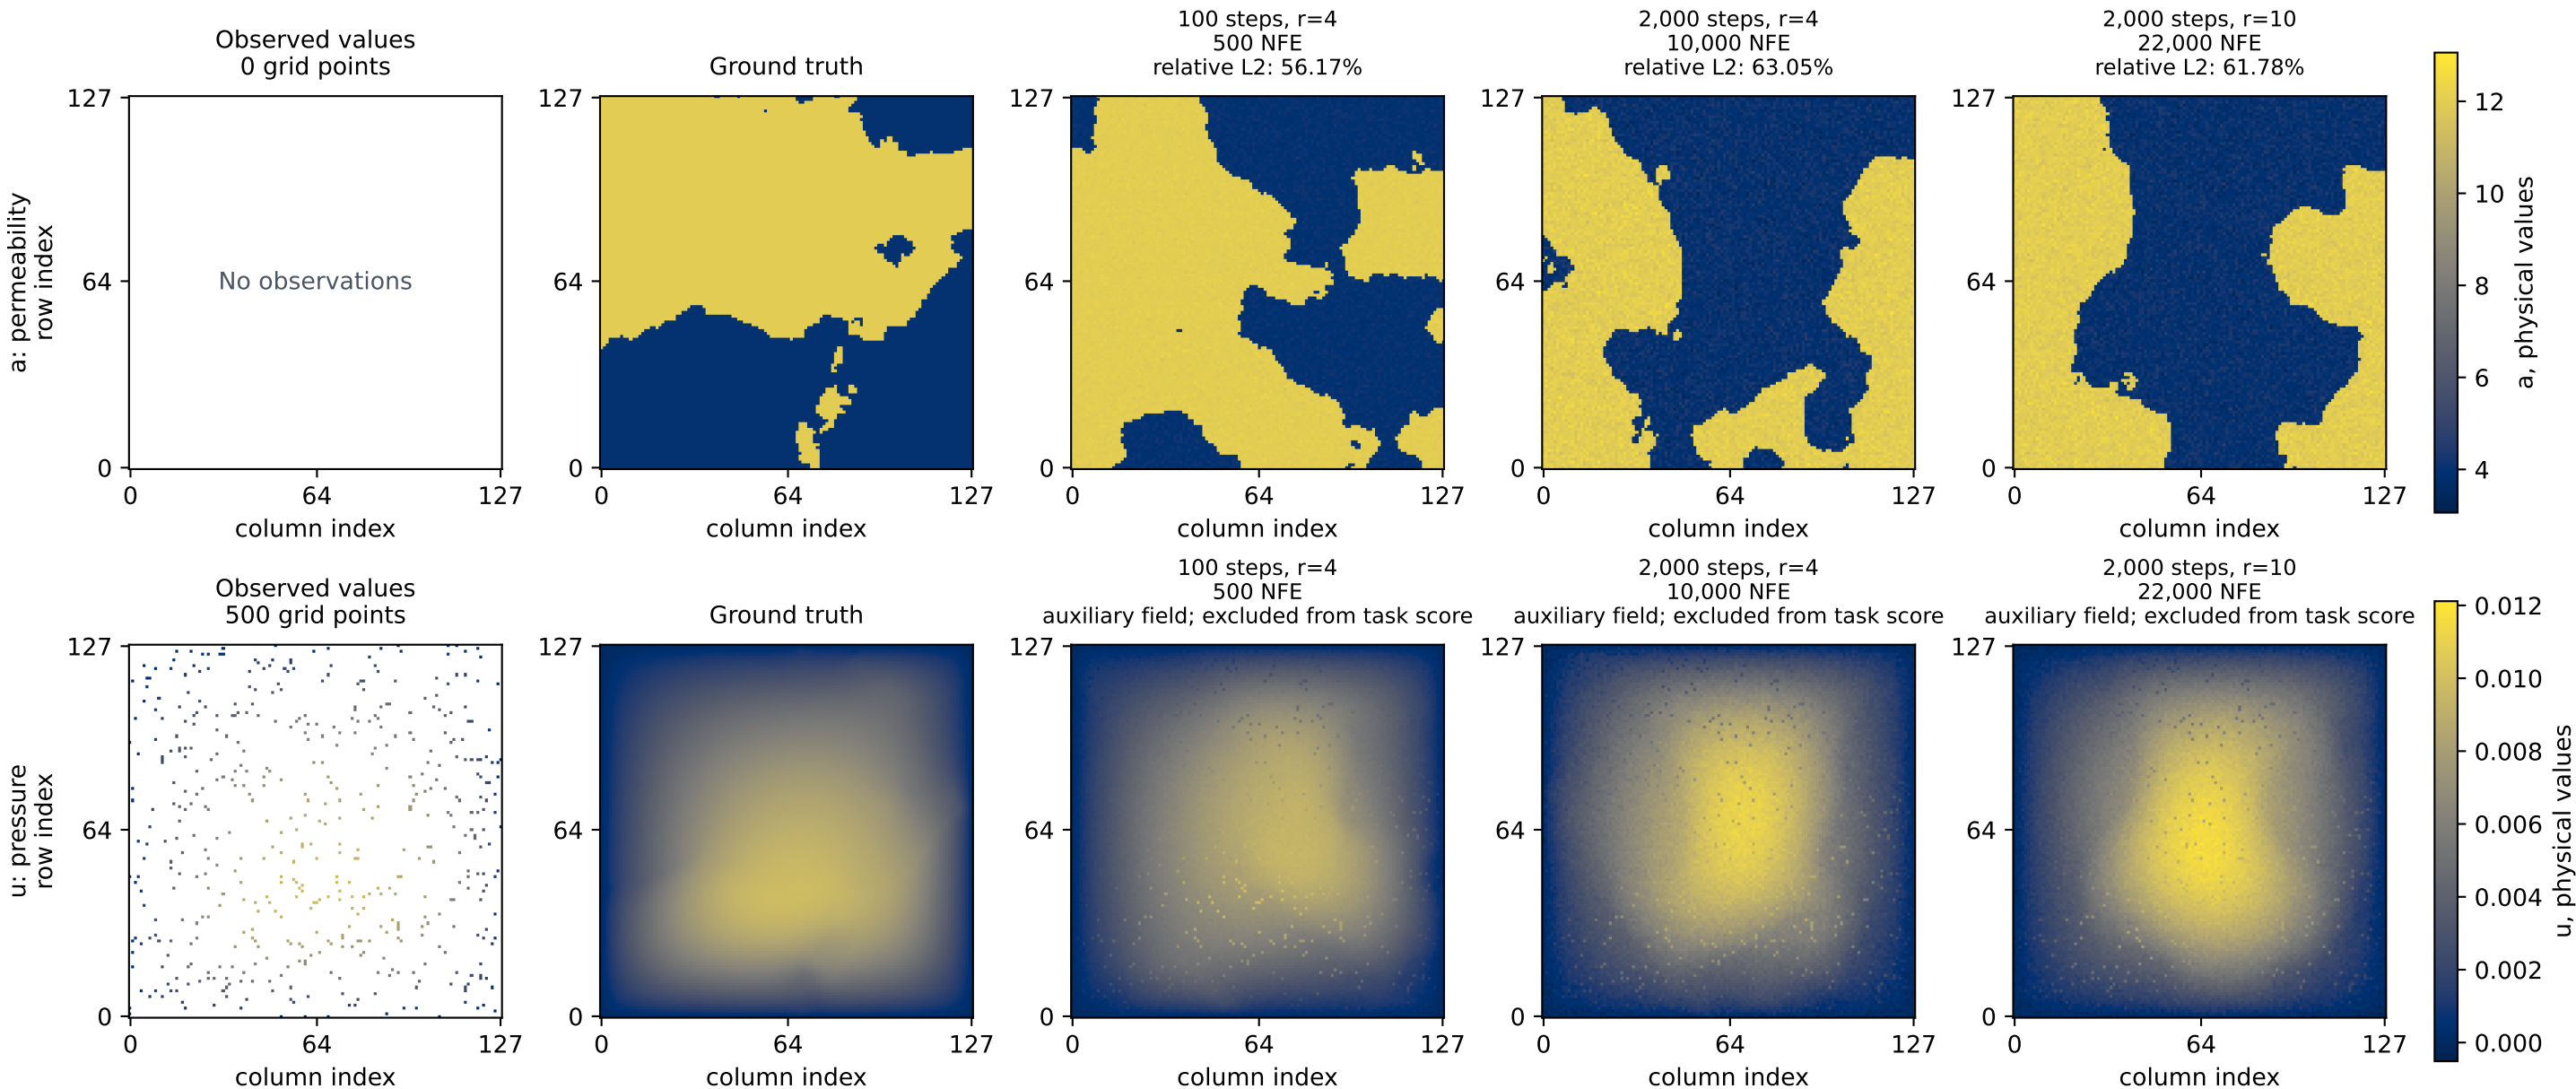

Same 8 calibration cases, seed and observations across configurations. One shared color scale per field across all pages; no image interpolation.
 RePaint r is the number of extra visits. This is an exploratory diagnostic, not a formal-main result.

Darcy / ID calibration / Sparse inverse / sample 1000

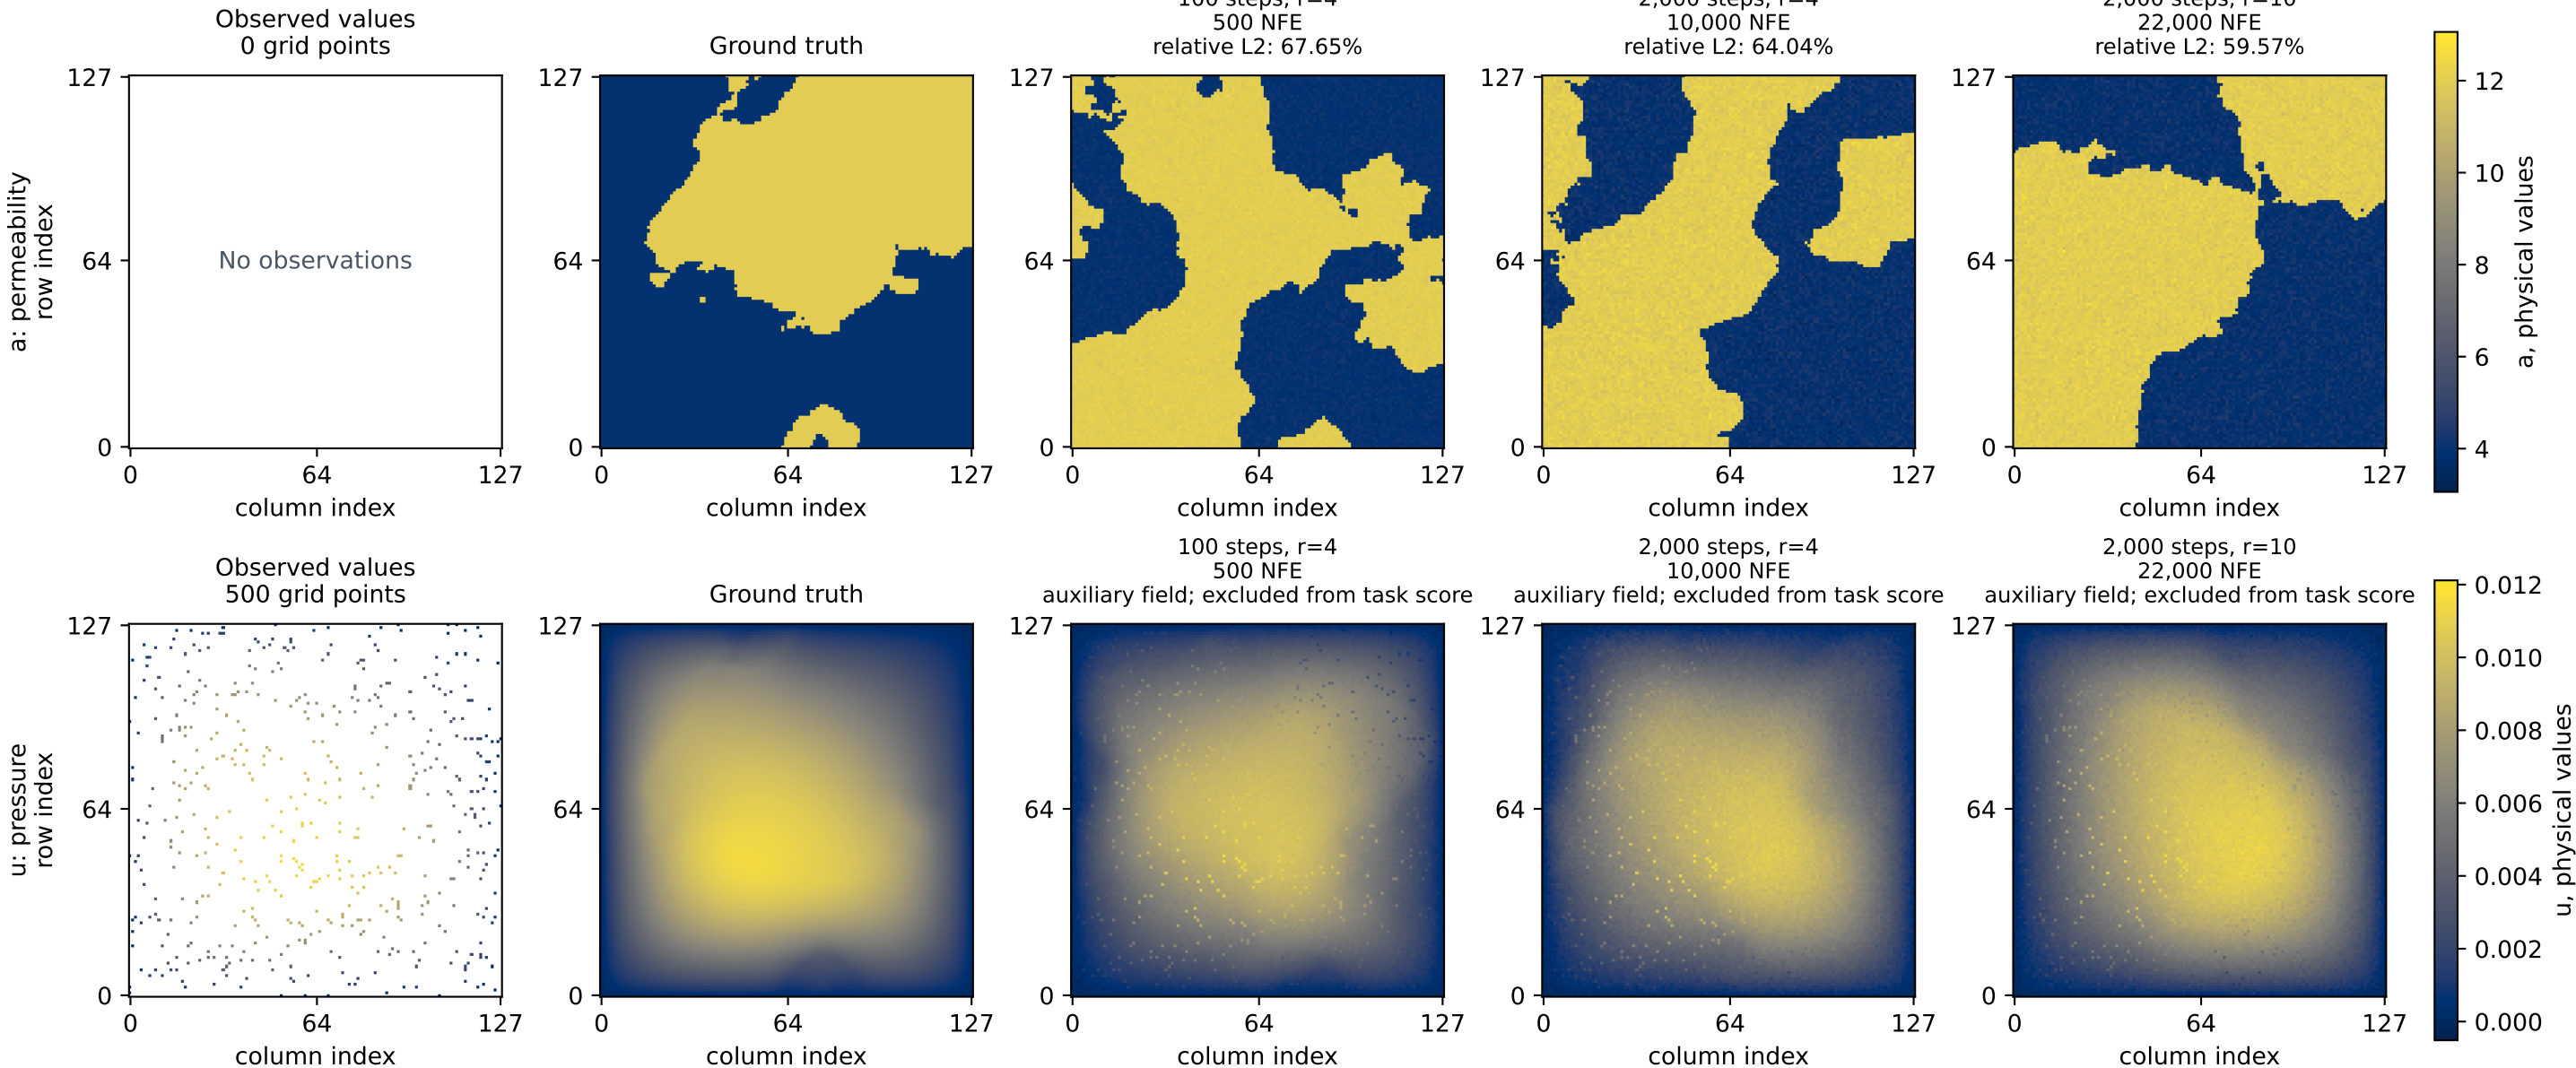

Same 8 calibration cases, seed and observations across configurations. One shared color scale per field across all pages; no image interpolation.
RePaint r is the number of extra visits. This is an exploratory diagnostic, not a formal-main result.

Darcy / ID calibration / Sparse inverse / sample 1001

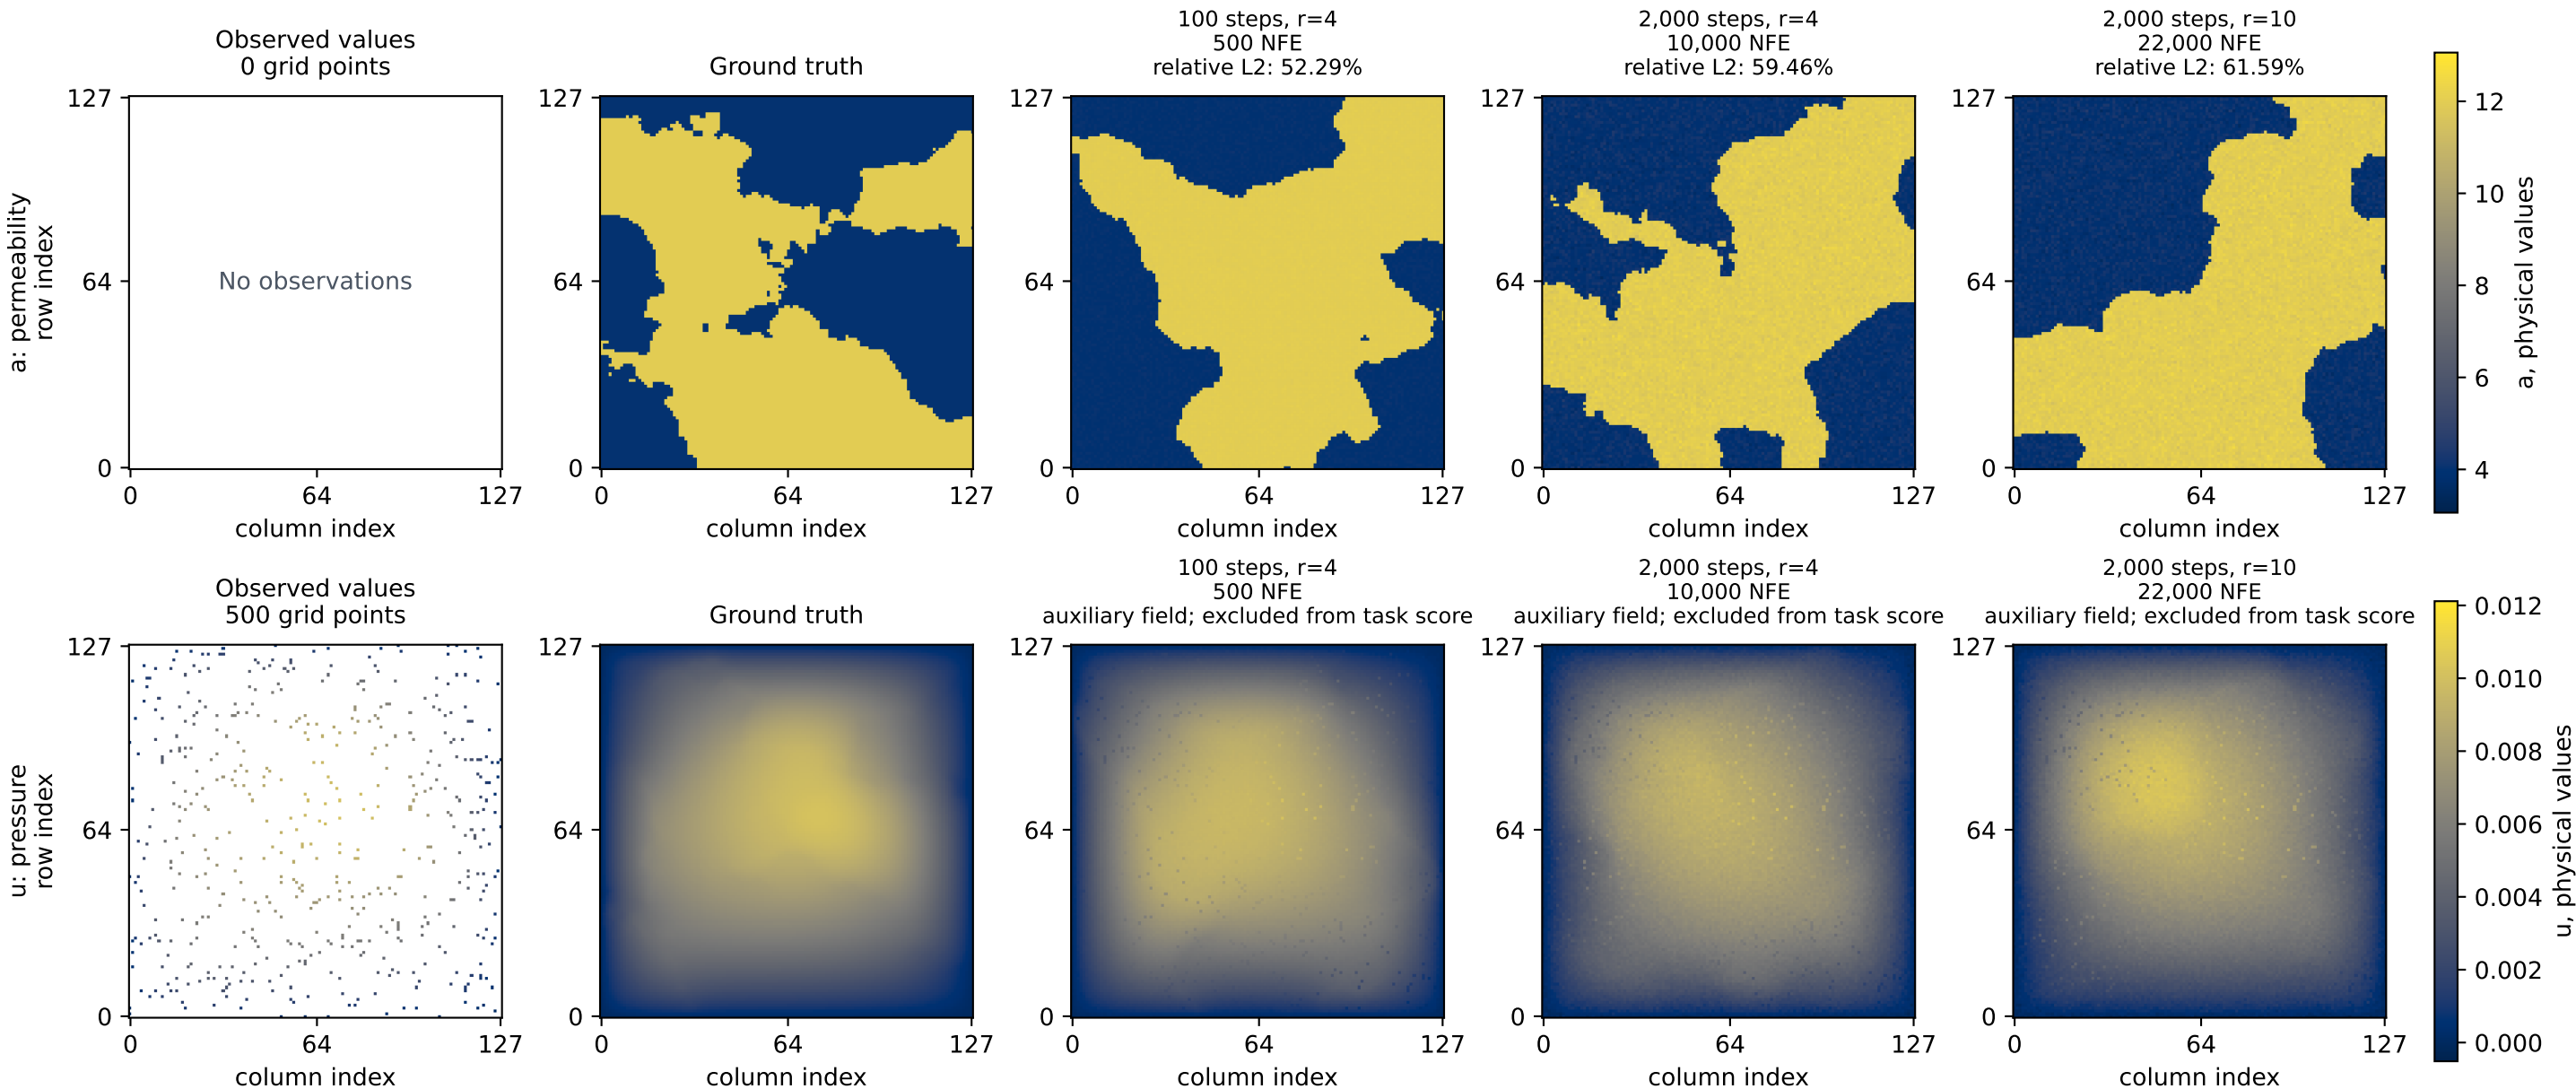

Same 8 calibration cases, seed and observations across configurations. One shared color scale per field across all pages; no image interpolation. RePaint r is the number of extra visits. This is an exploratory diagnostic, not a formal-main result.

Darcy / ID calibration / Sparse inverse / sample 1002

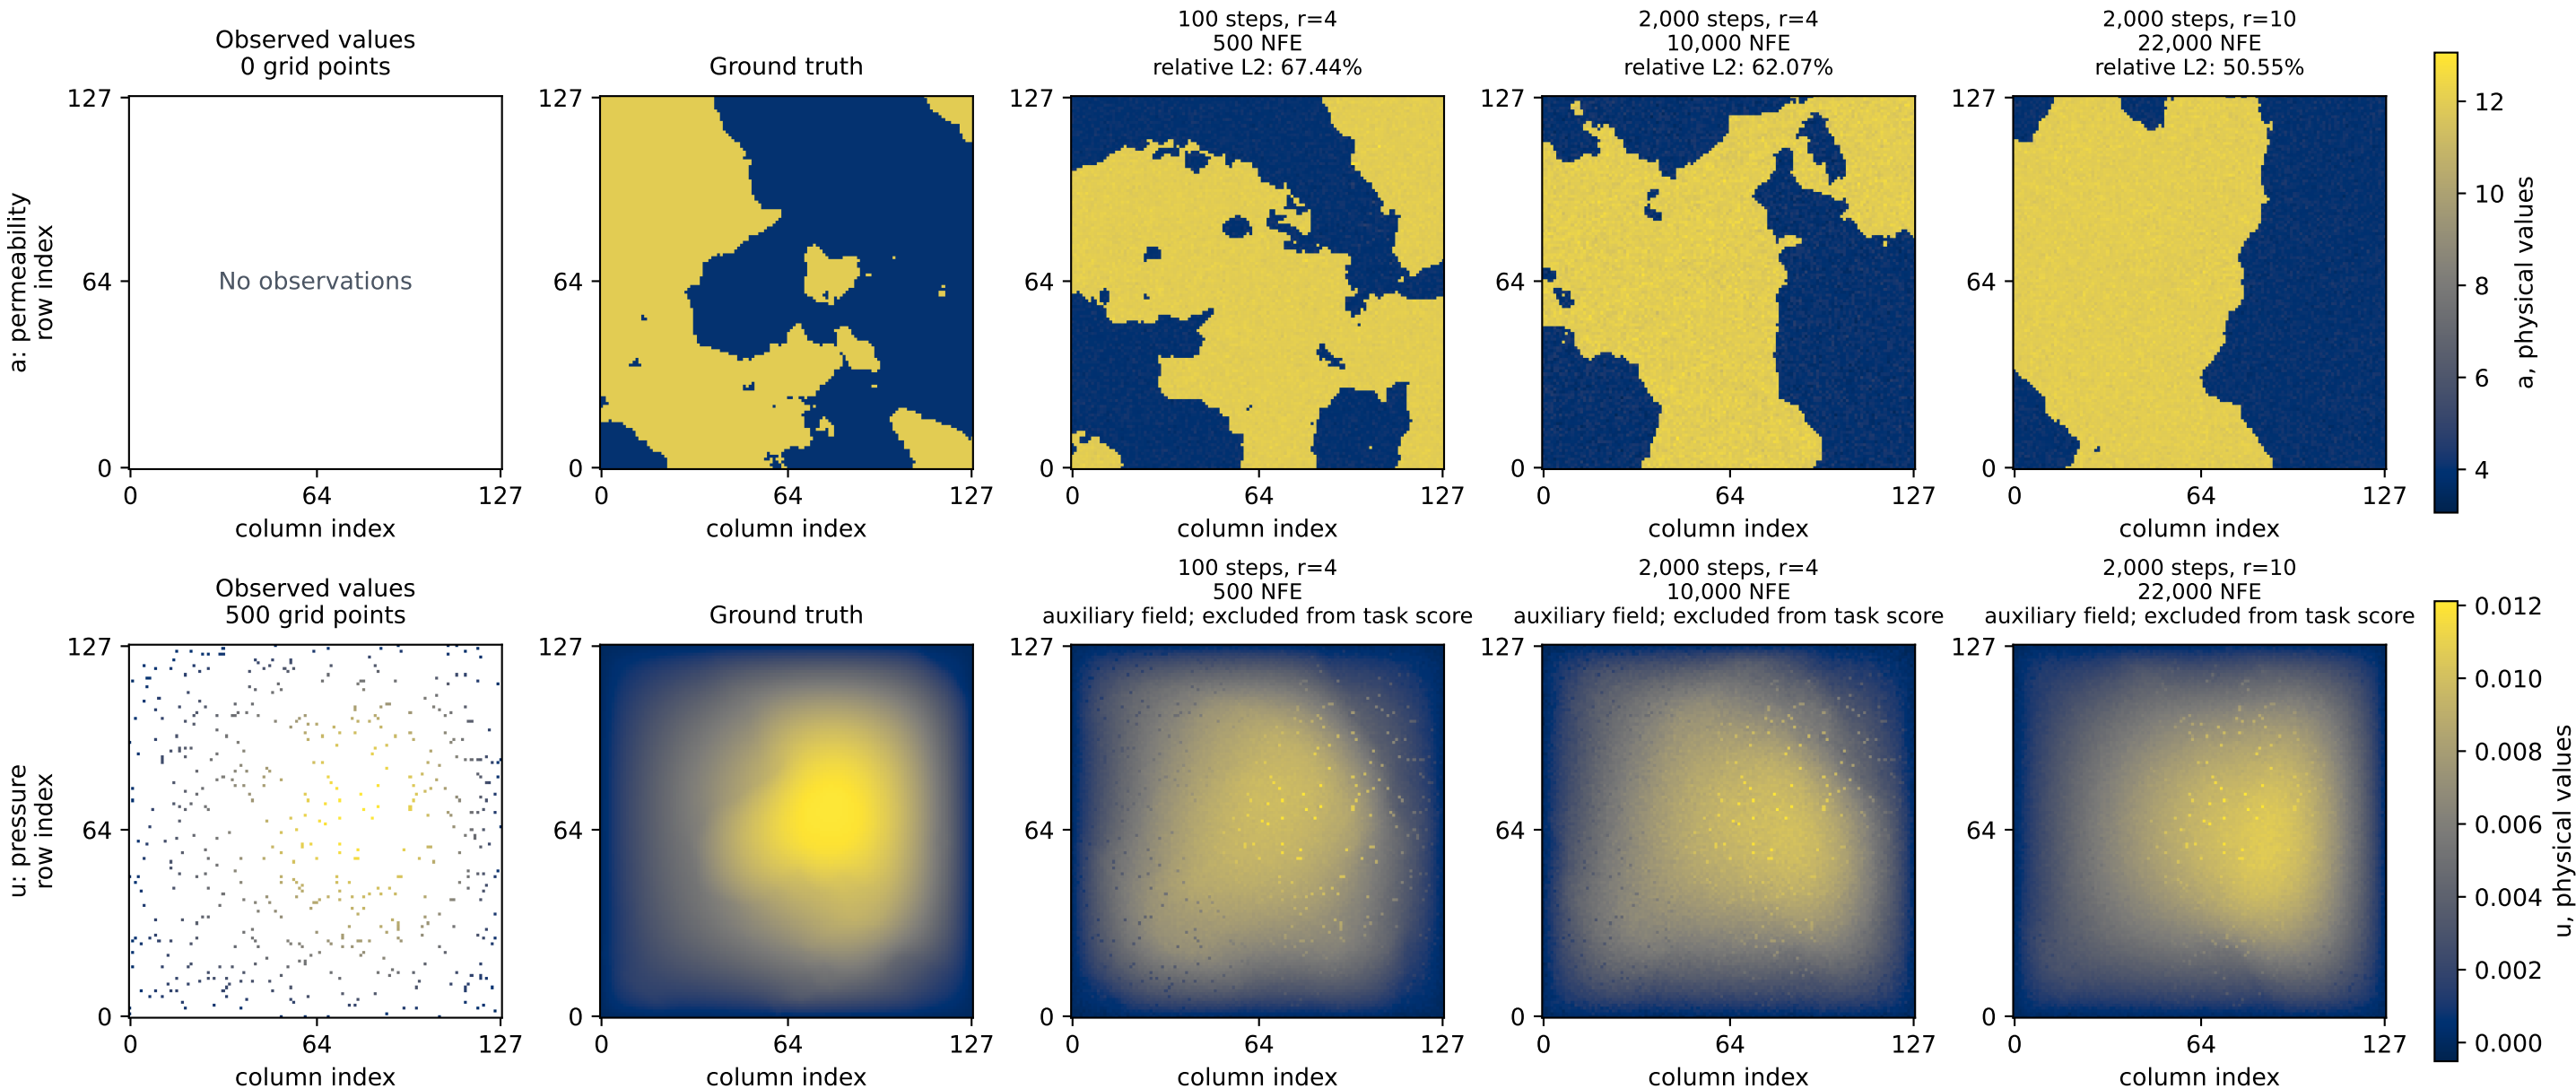

Same 8 calibration cases, seed and observations across configurations. One shared color scale per field across all pages; no image interpolation.
RePaint r is the number of extra visits. This is an exploratory diagnostic, not a formal-main result.

Darcy / ID calibration / Sparse inverse / sample 1003

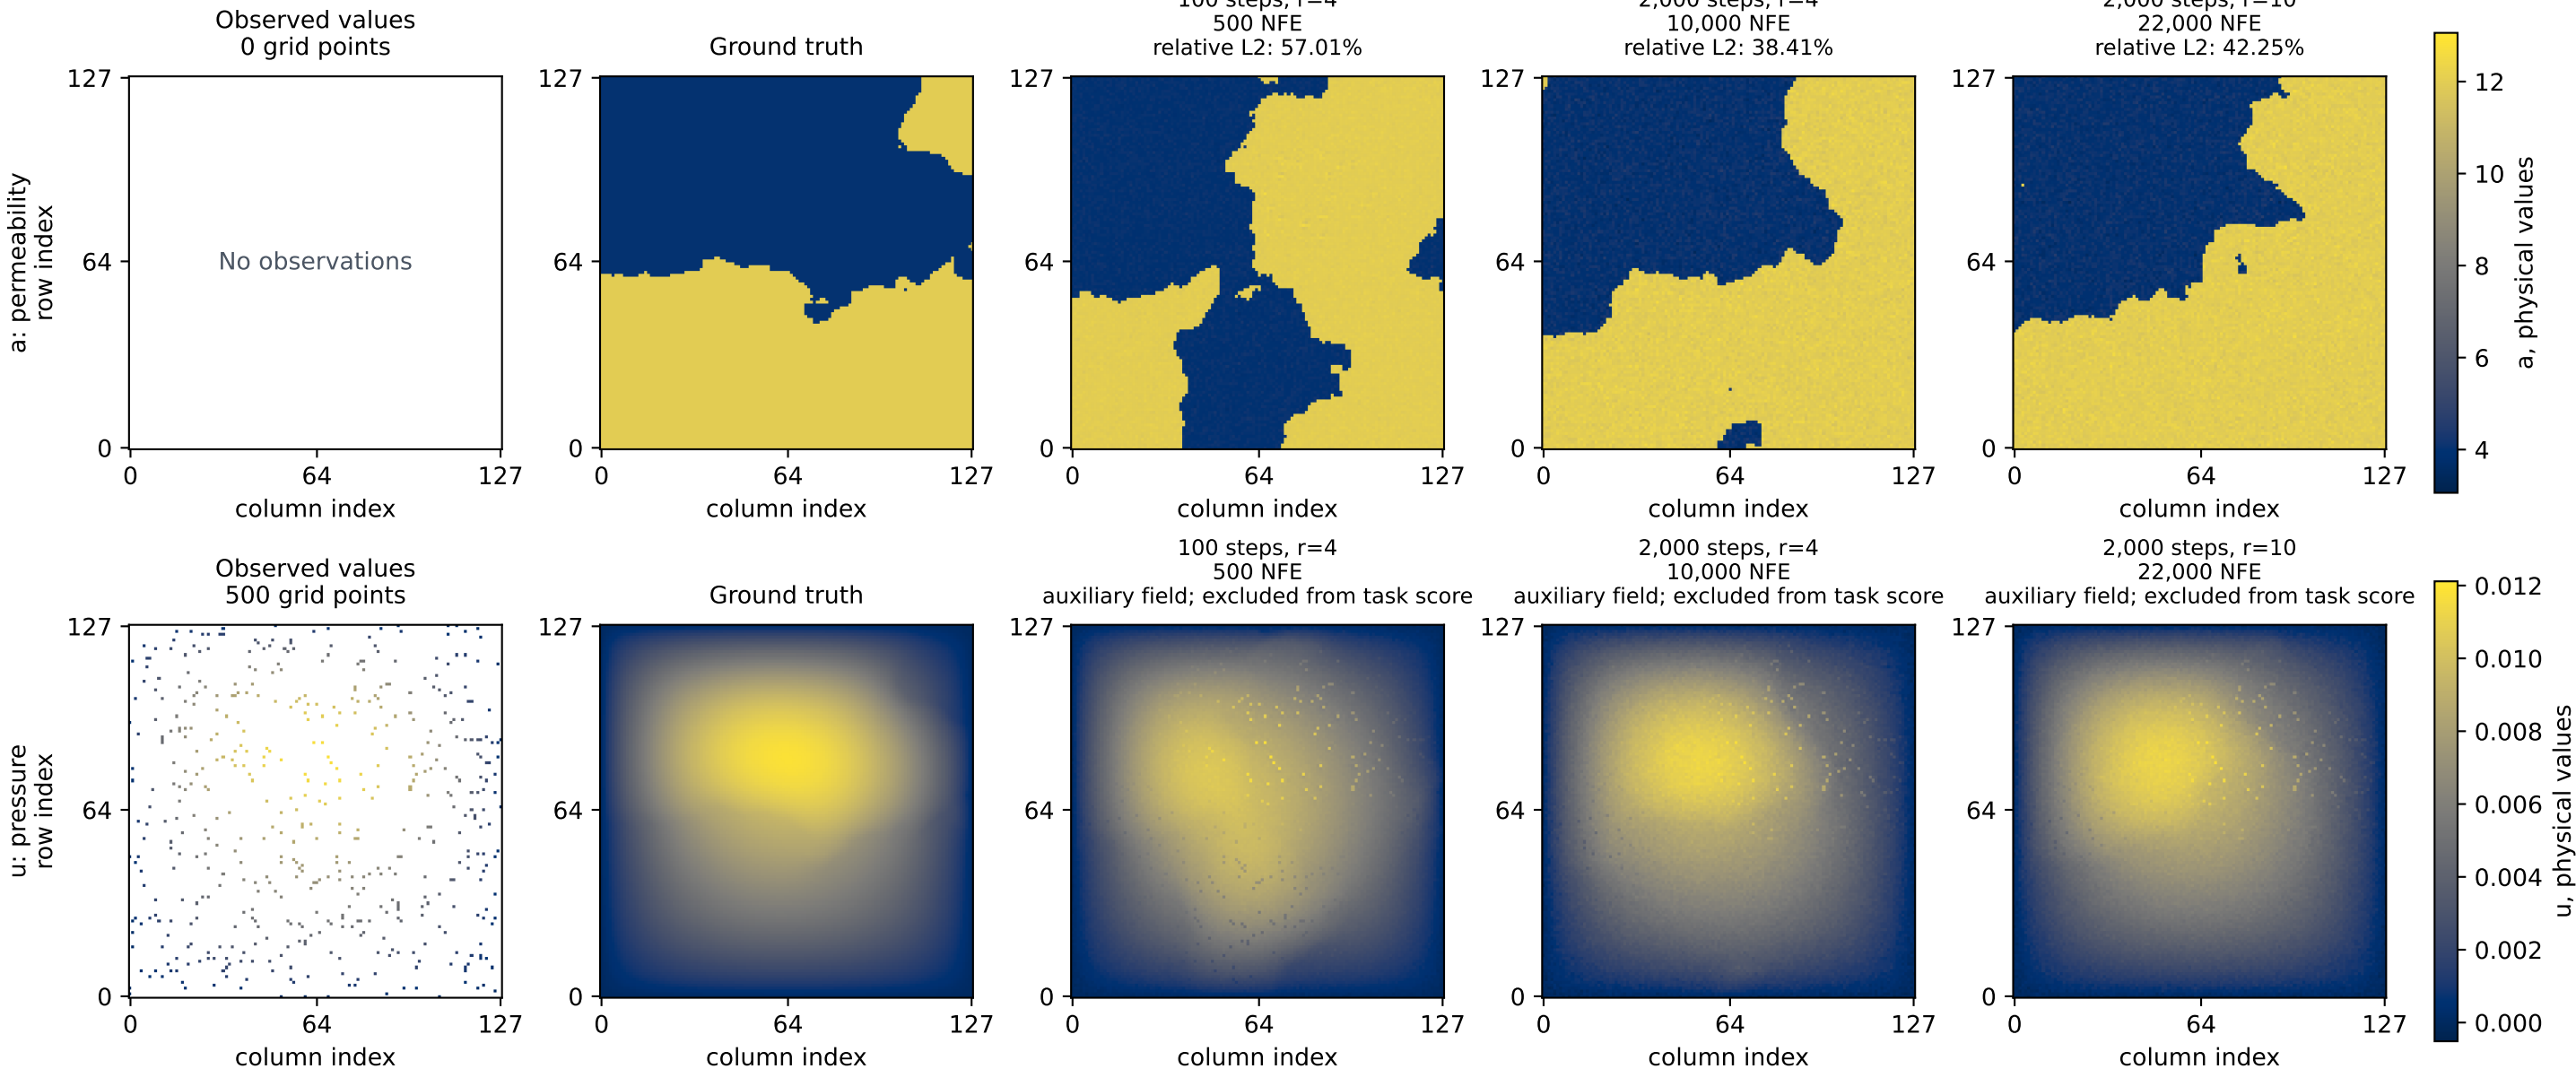

Same 8 calibration cases, seed and observations across configurations. One shared color scale per field across all pages; no image interpolation.
RePaint r is the number of extra visits. This is an exploratory diagnostic, not a formal-main result.

Darcy / ID calibration / Sparse inverse / sample 1004

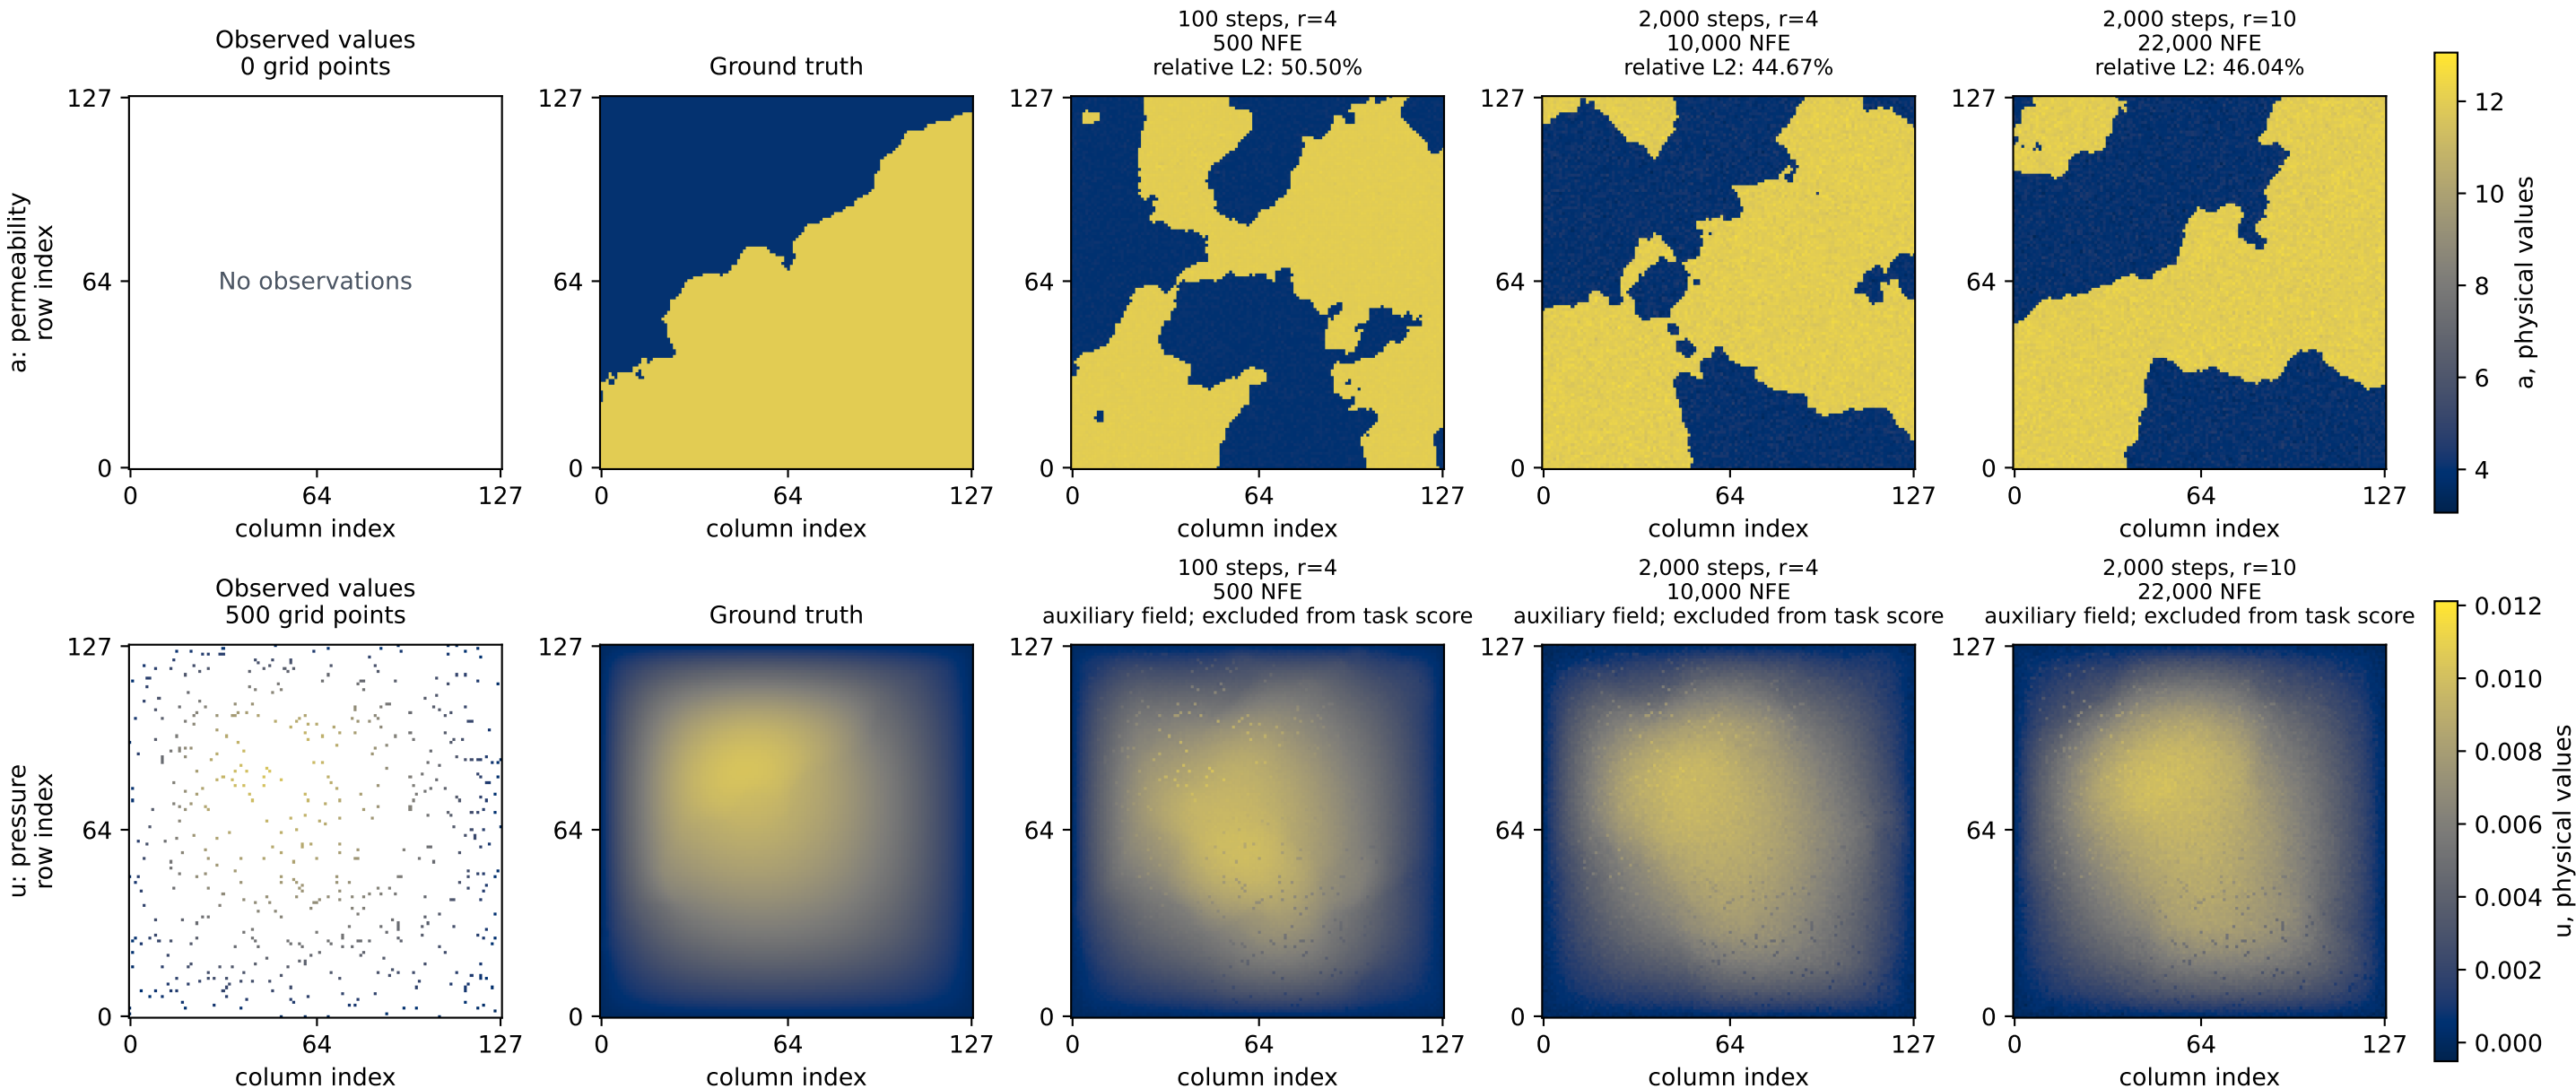

Same 8 calibration cases, seed and observations across configurations. One shared color scale per field across all pages; no image interpolation.
 RePaint r is the number of extra visits. This is an exploratory diagnostic, not a formal-main result.

Darcy / ID calibration / Sparse inverse / sample 1005

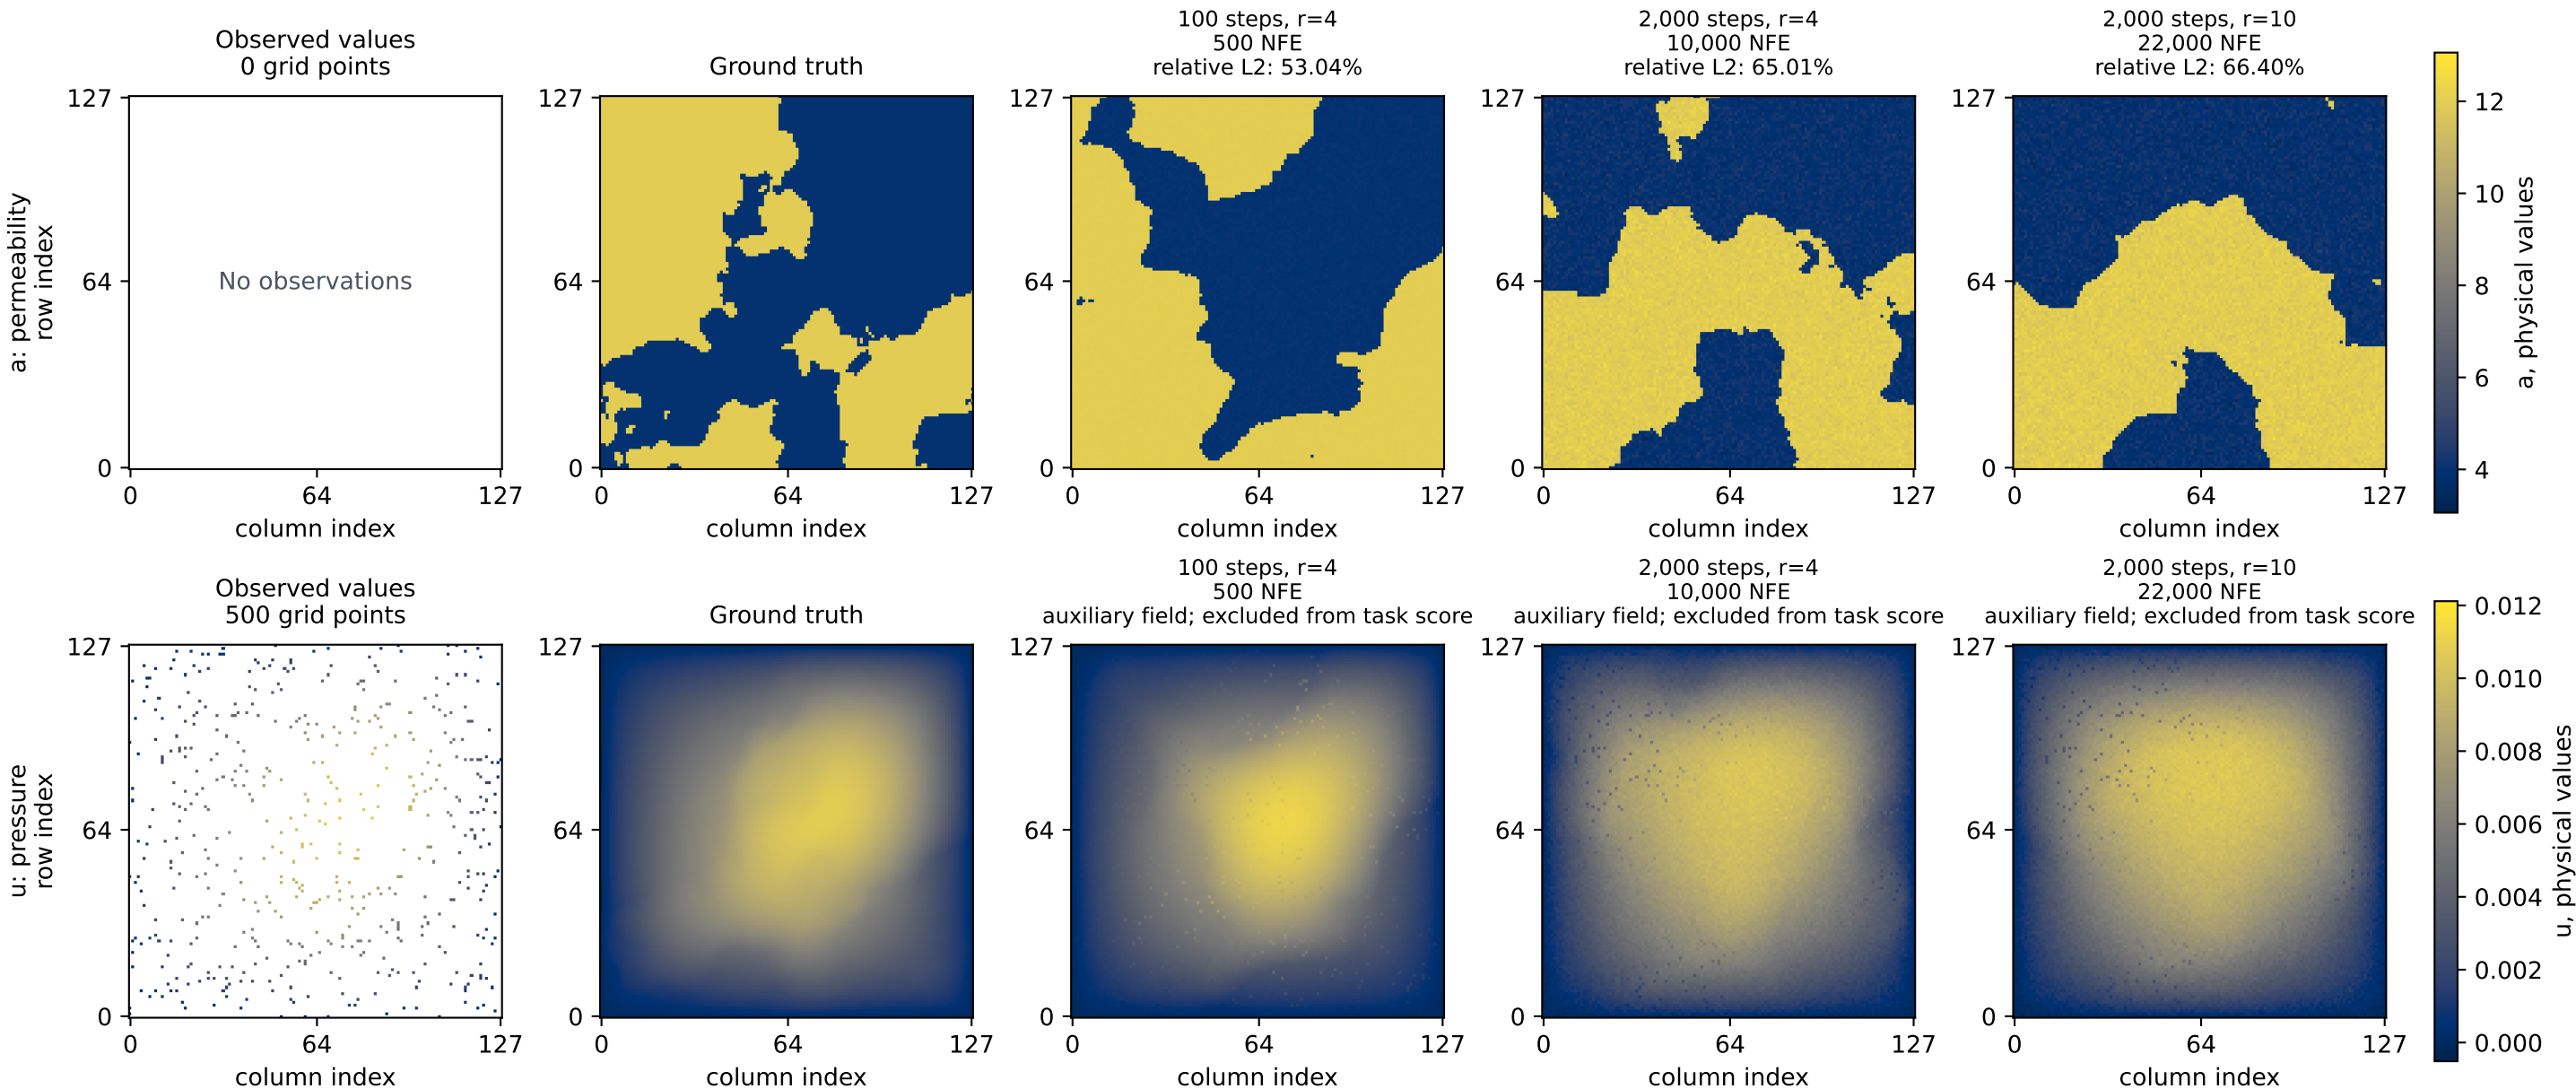

Same 8 calibration cases, seed and observations across configurations. One shared color scale per field across all pages; no image interpolation.
RePaint r is the number of extra visits. This is an exploratory diagnostic, not a formal-main result.

Darcy / ID calibration / Sparse inverse / sample 1006

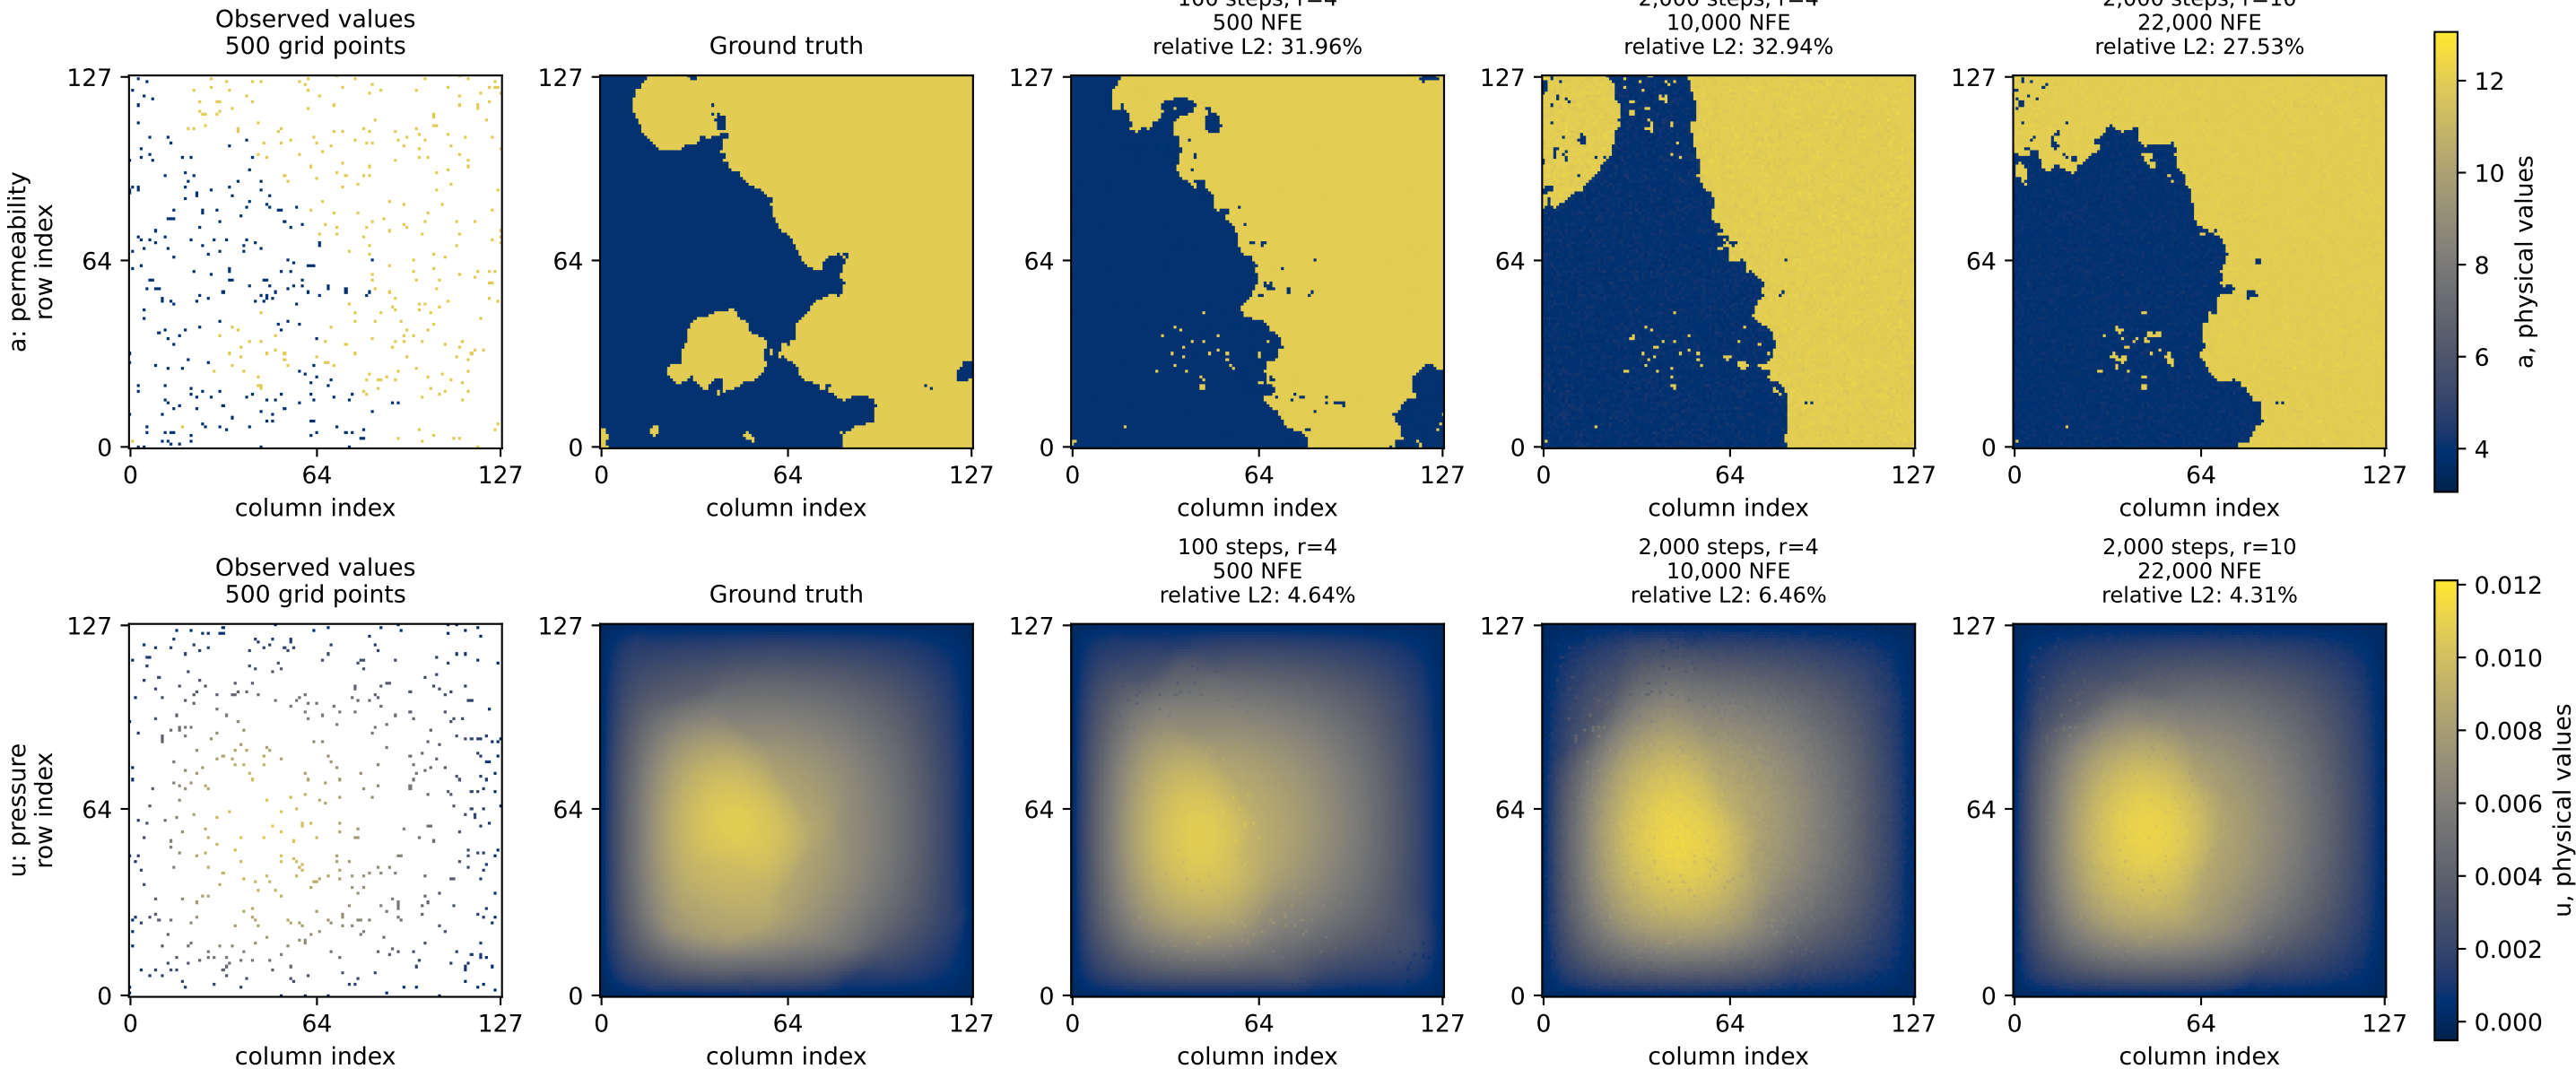

Same 8 calibration cases, seed and observations across configurations. One shared color scale per field across all pages; no image interpolation.
RePaint r is the number of extra visits. This is an exploratory diagnostic, not a formal-main result.

Darcy / ID calibration / Sparse inverse / sample 1007

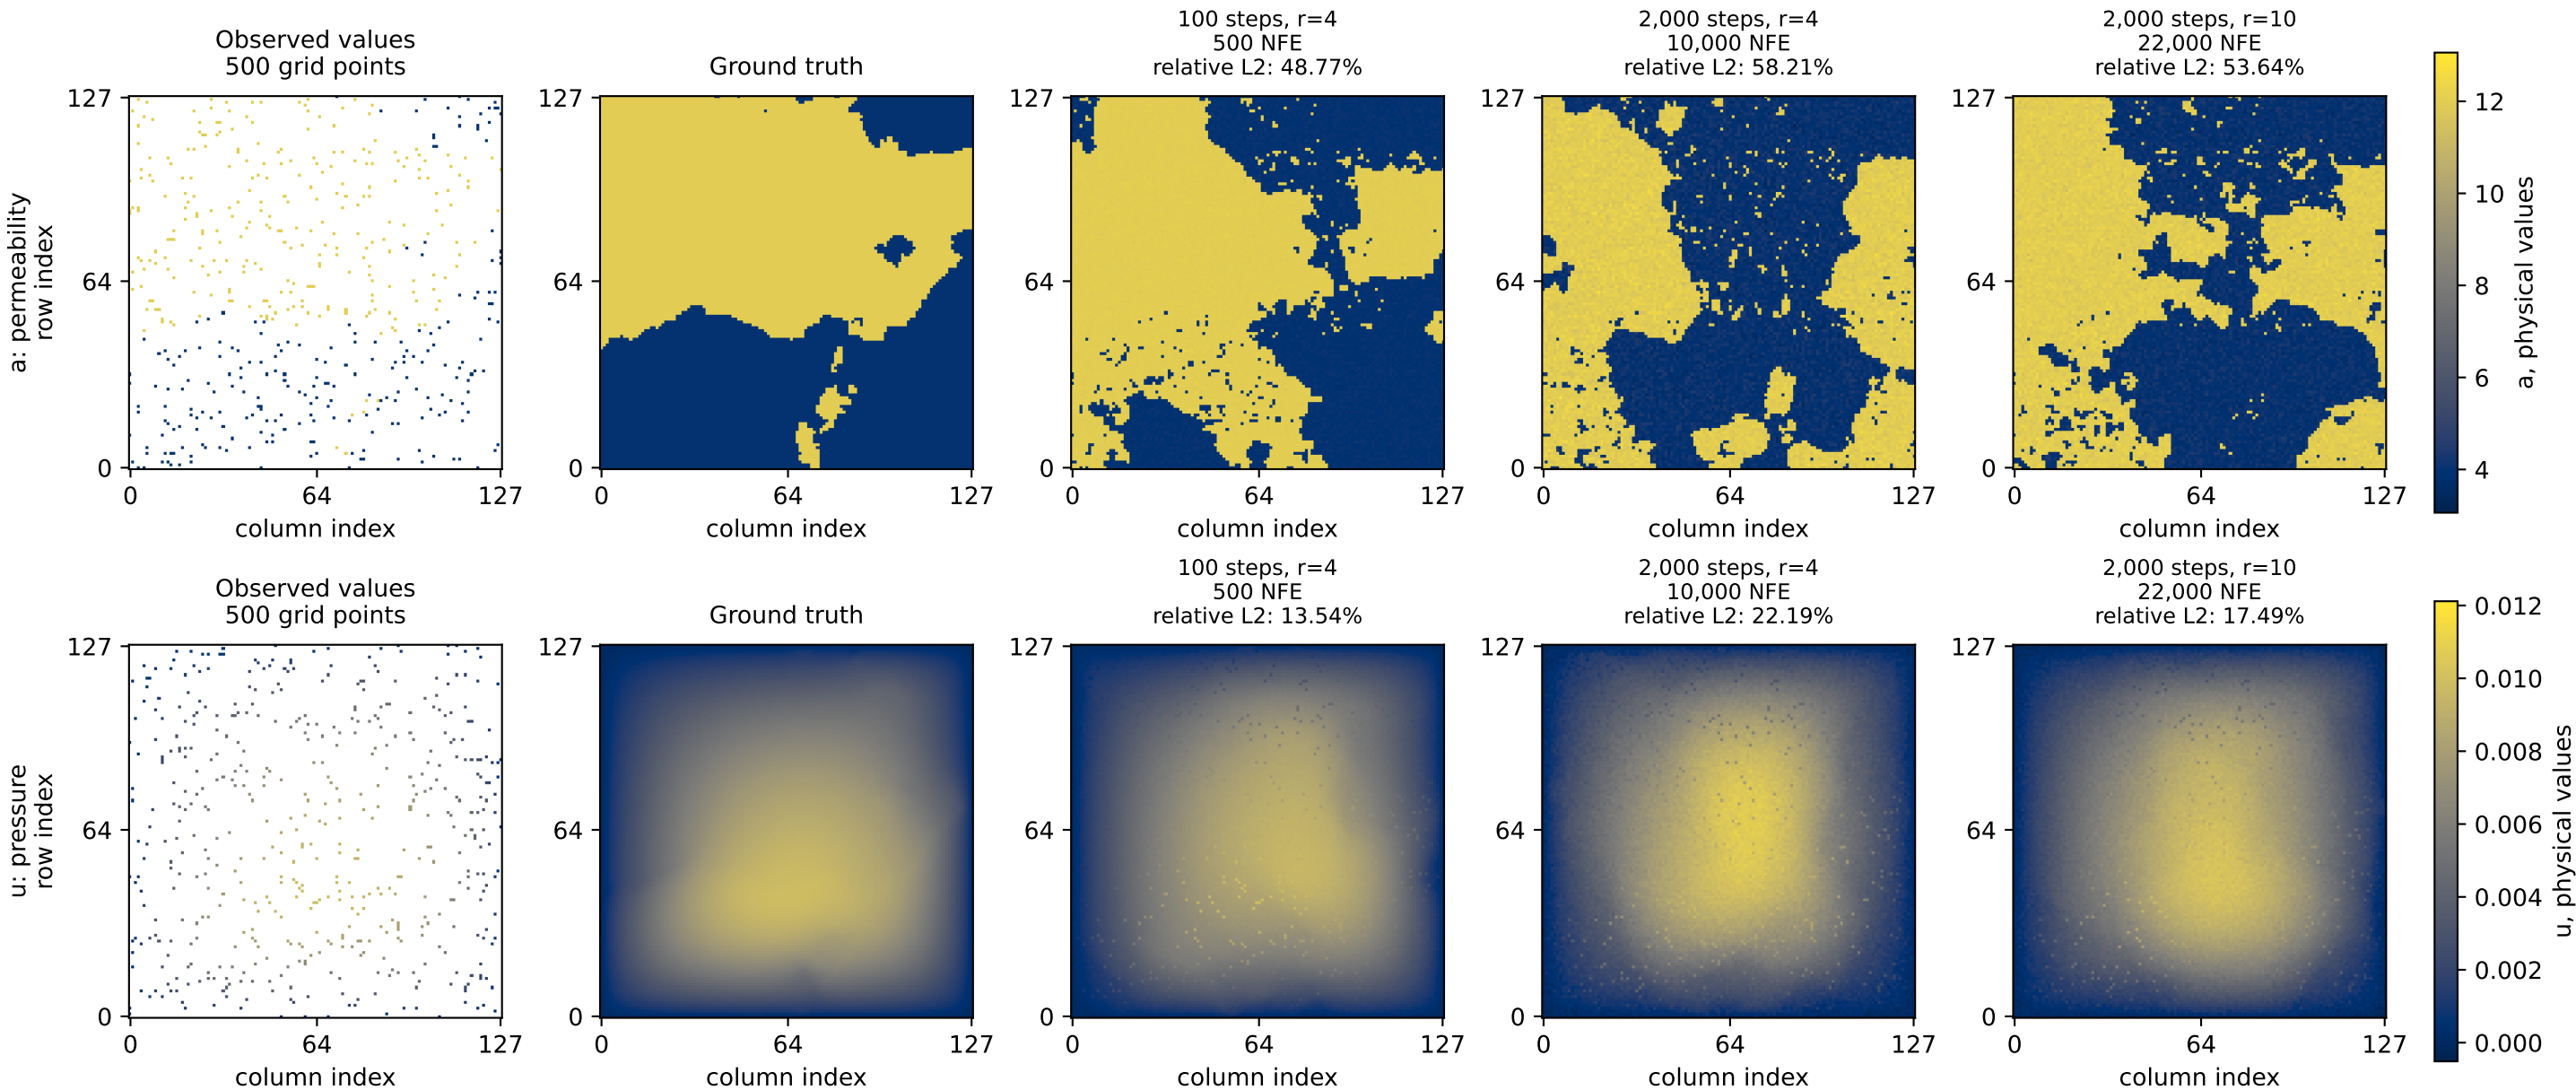

Same 8 calibration cases, seed and observations across configurations. One shared color scale per field across all pages; no image interpolation.
RePaint r is the number of extra visits. This is an exploratory diagnostic, not a formal-main result.

Darcy / ID calibration / Sparse joint reconstruction / sample 1000

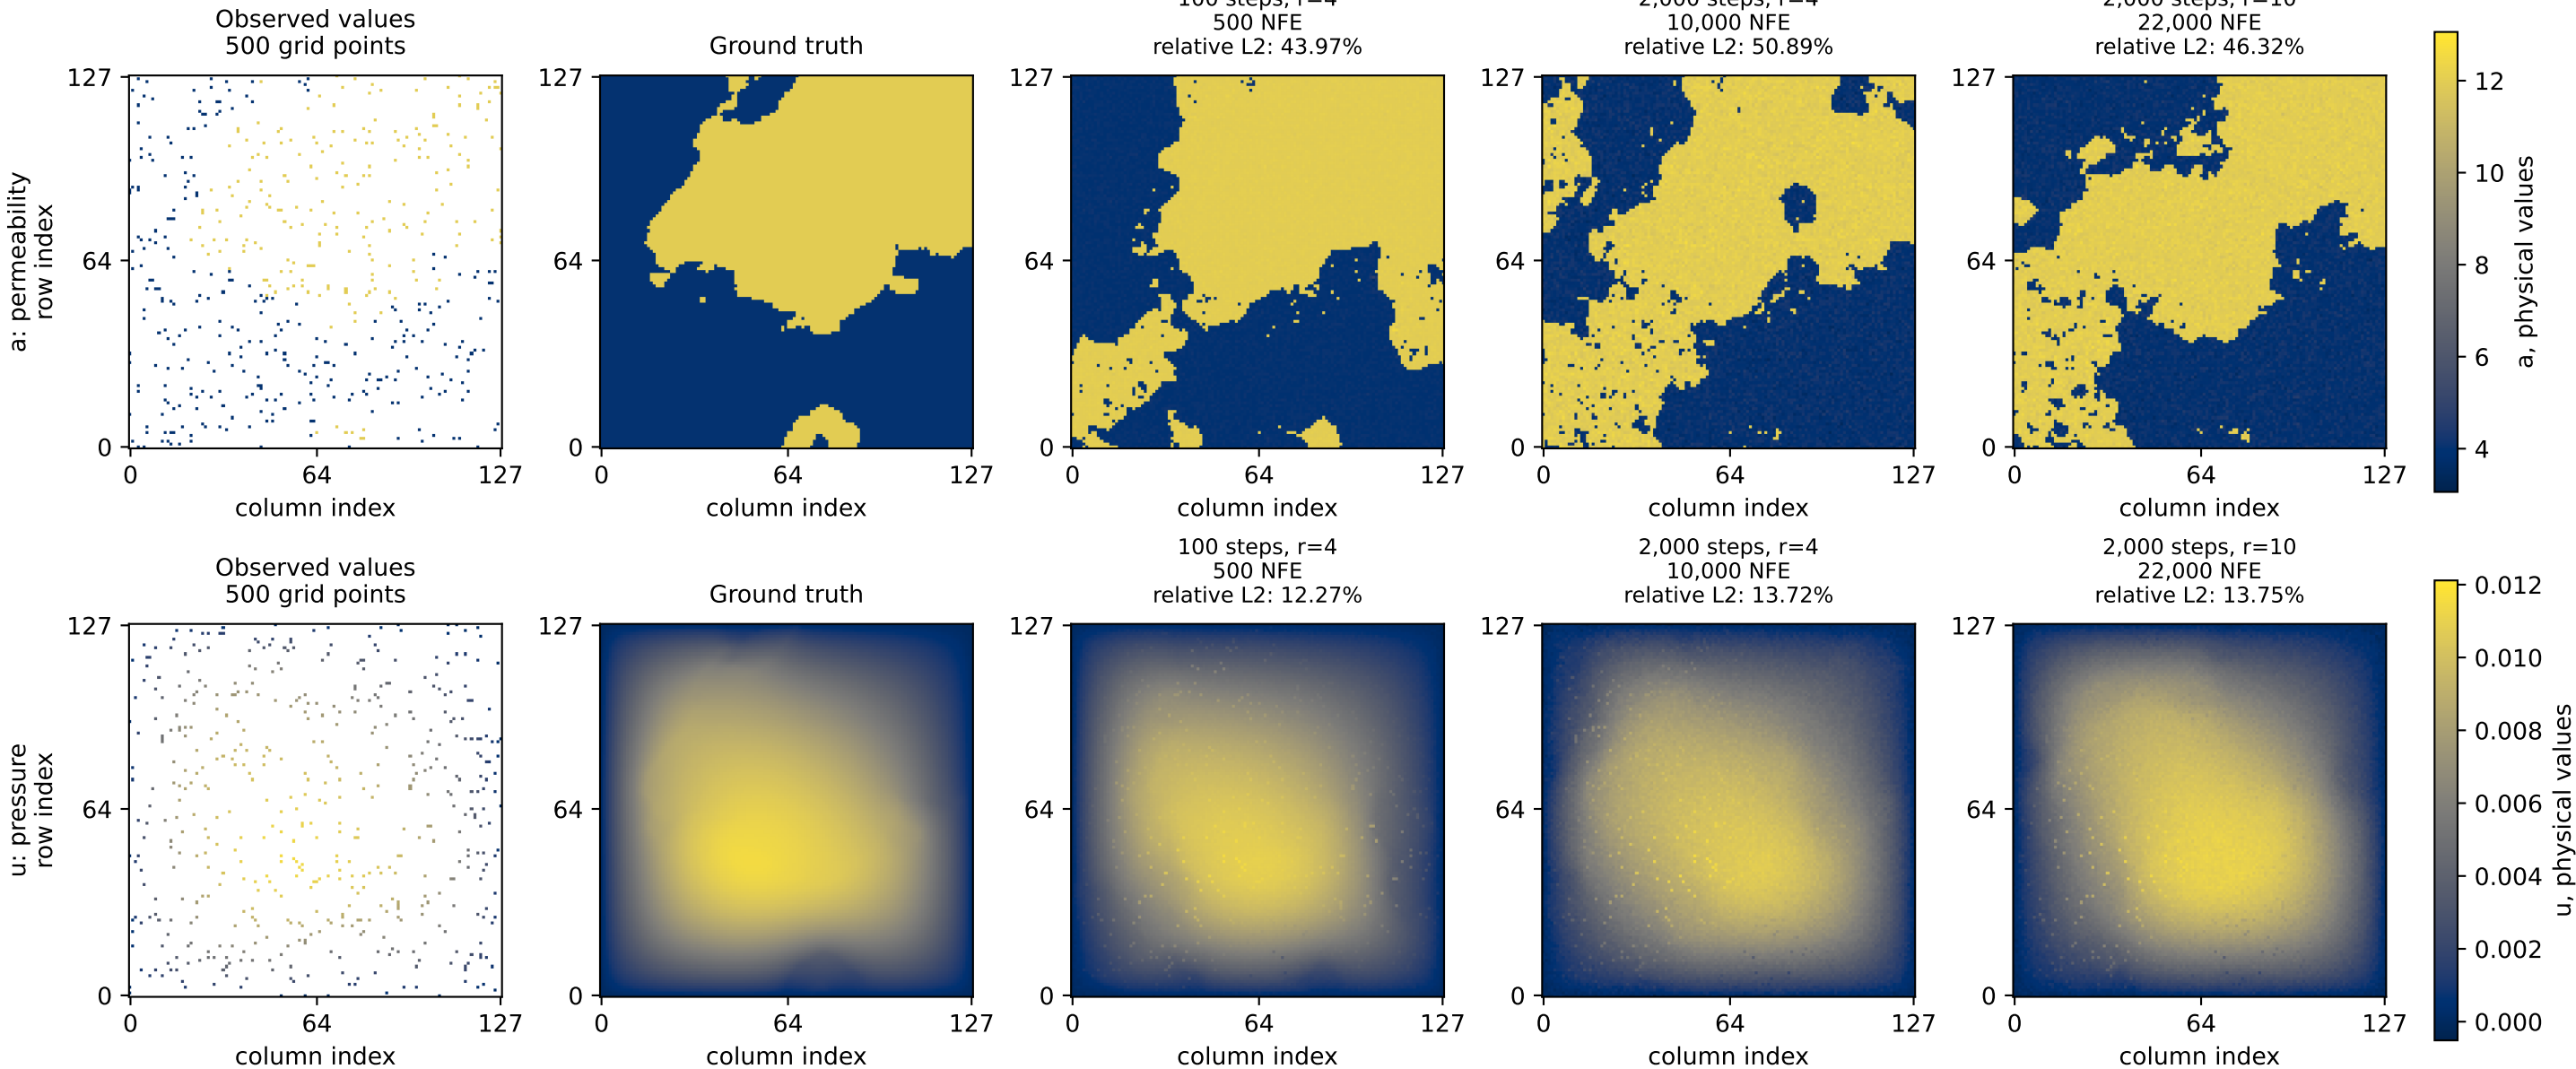

Same 8 calibration cases, seed and observations across configurations. One shared color scale per field across all pages; no image interpolation.
 RePaint r is the number of extra visits. This is an exploratory diagnostic, not a formal-main result.

Darcy / ID calibration / Sparse joint reconstruction / sample 1001

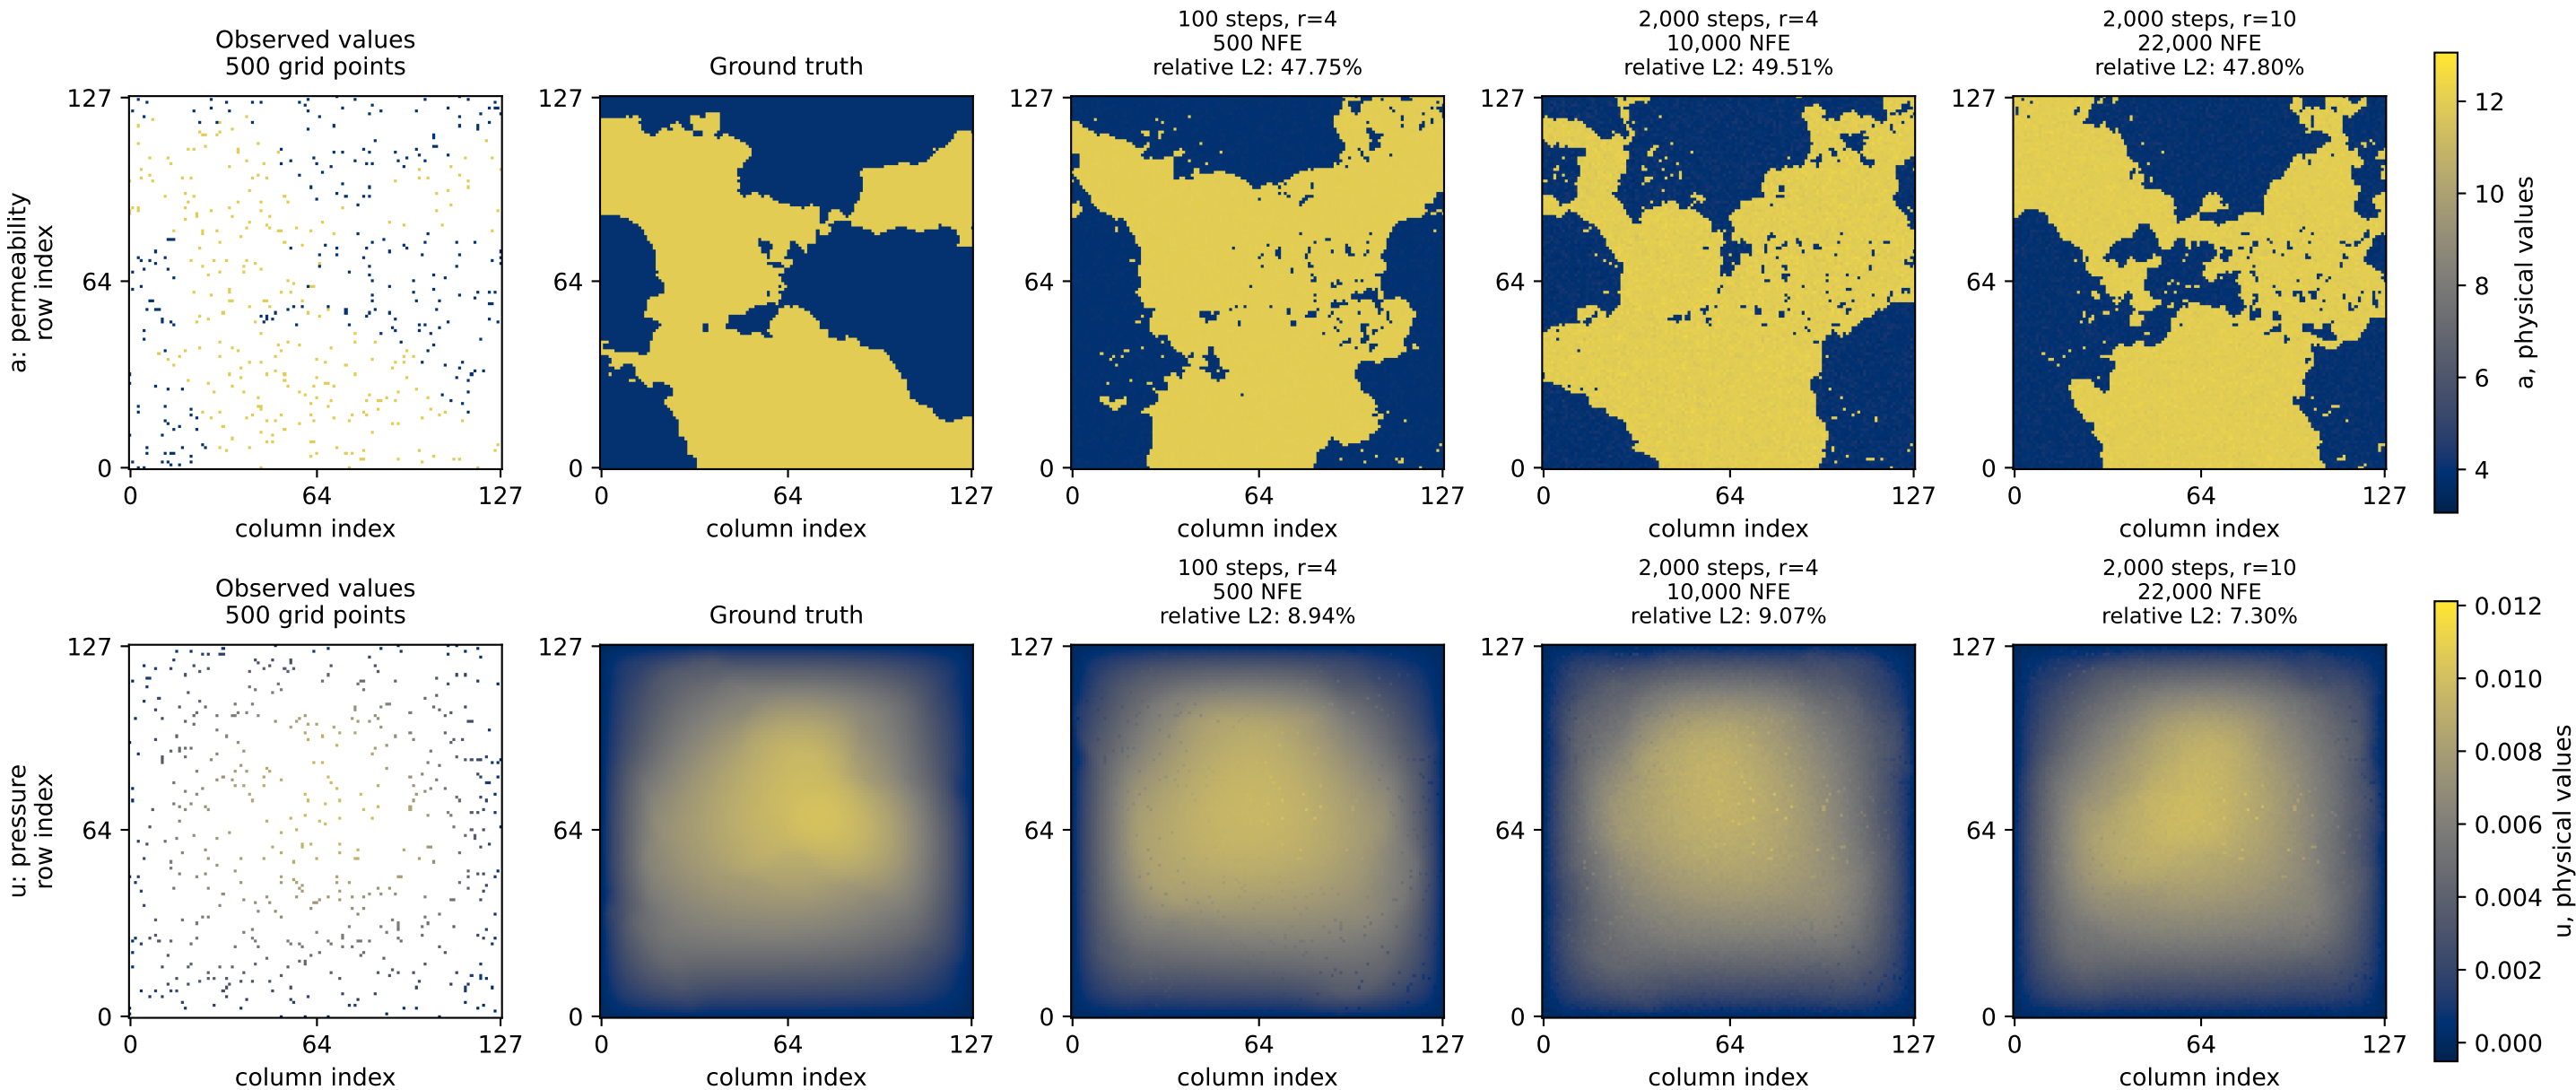

Same 8 calibration cases, seed and observations across configurations. One shared color scale per field across all pages; no image interpolation.
RePaint r is the number of extra visits. This is an exploratory diagnostic, not a formal-main result.

Darcy / ID calibration / Sparse joint reconstruction / sample 1002

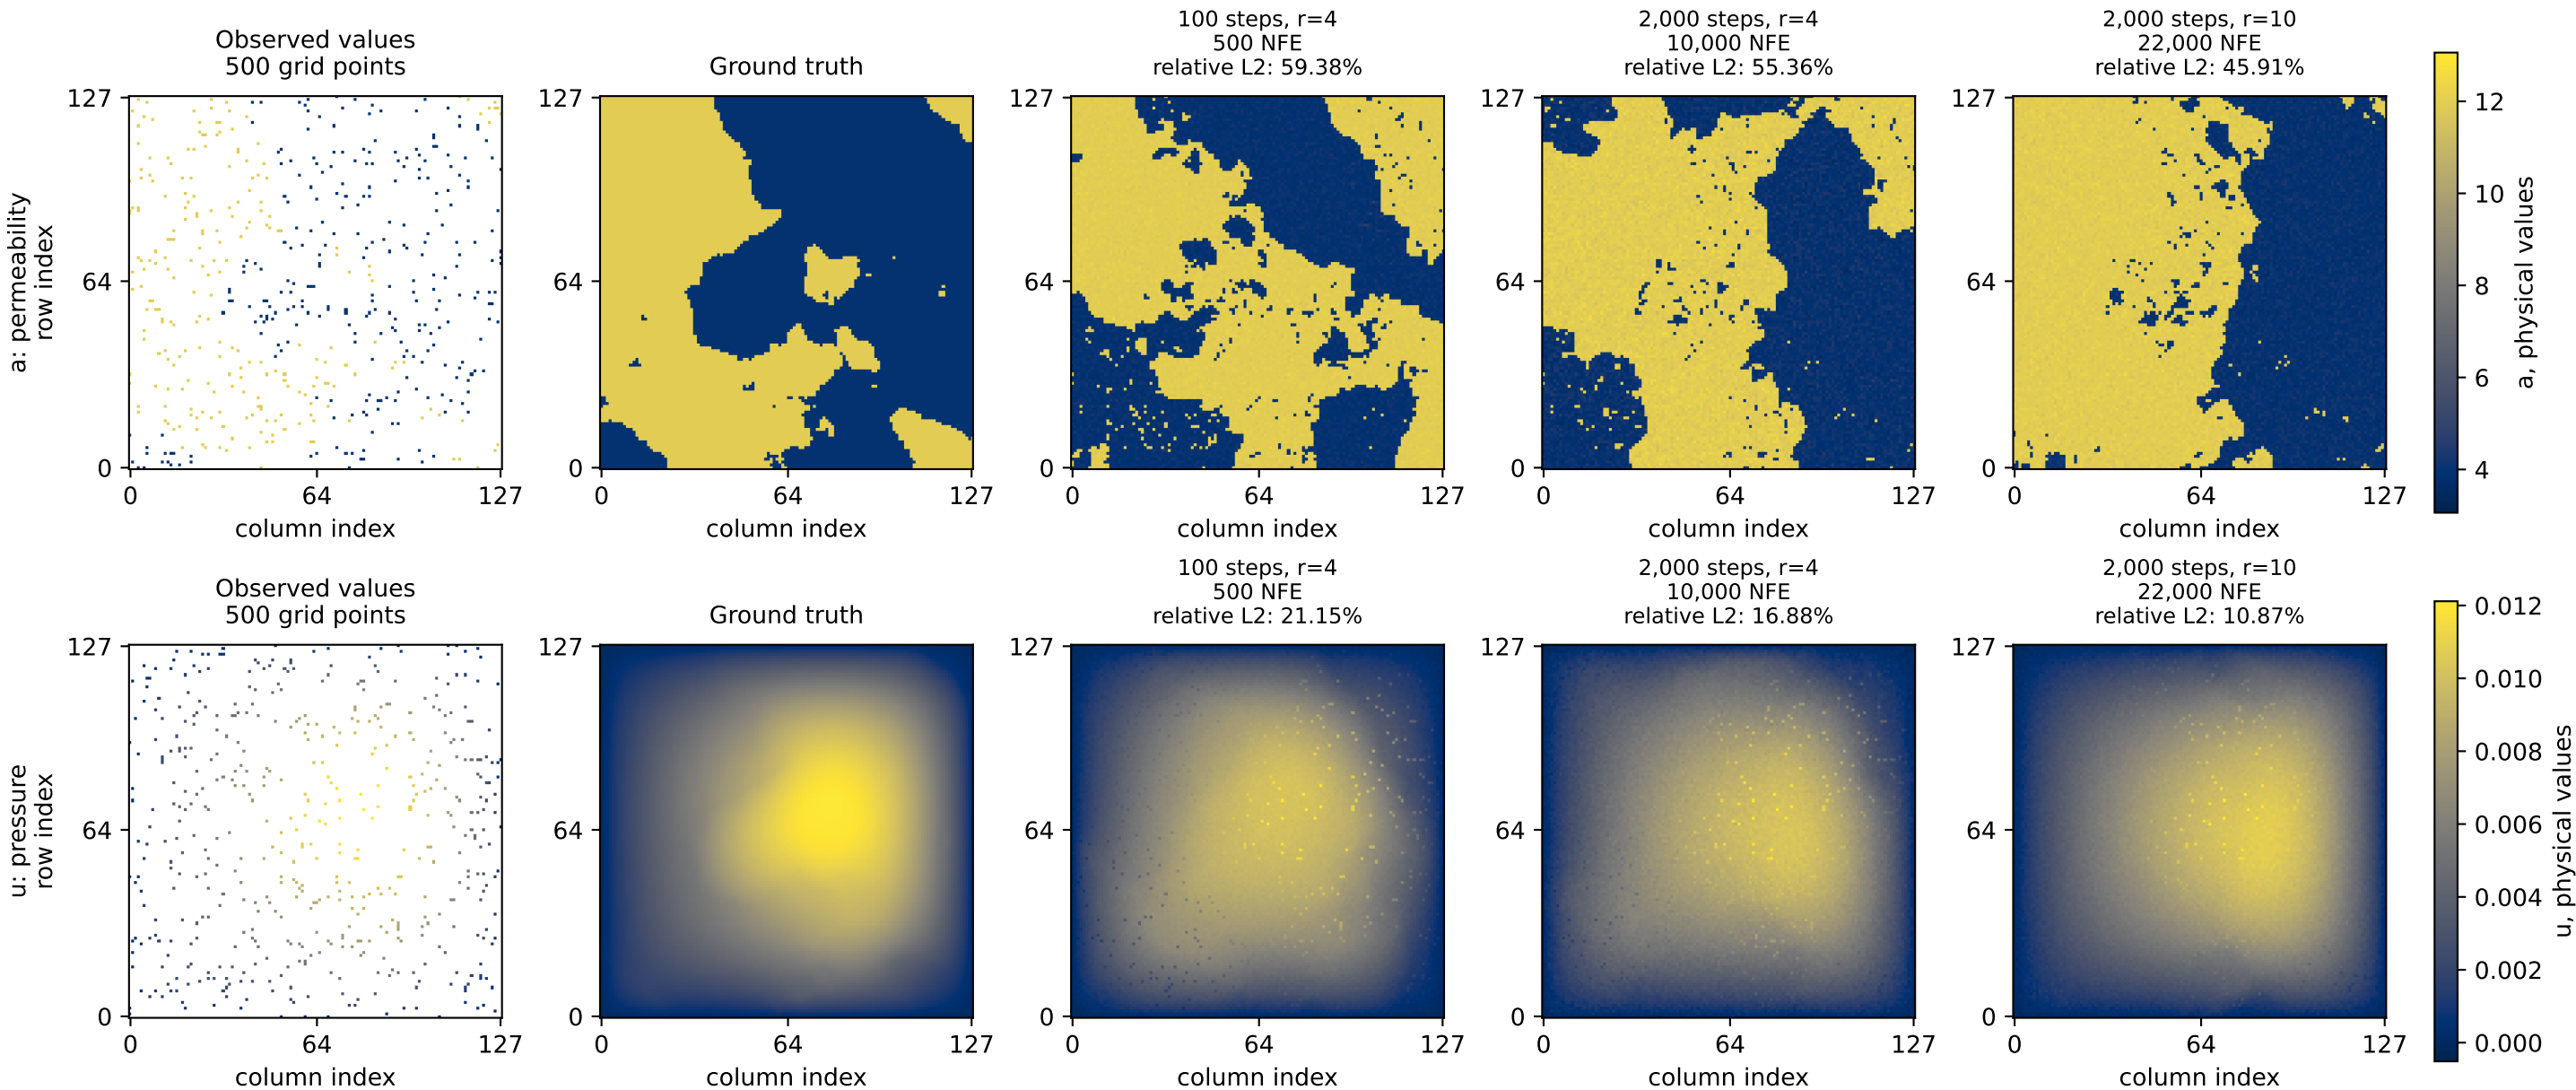

Same 8 calibration cases, seed and observations across configurations. One shared color scale per field across all pages; no image interpolation.
 RePaint r is the number of extra visits. This is an exploratory diagnostic, not a formal-main result.

Darcy / ID calibration / Sparse joint reconstruction / sample 1003

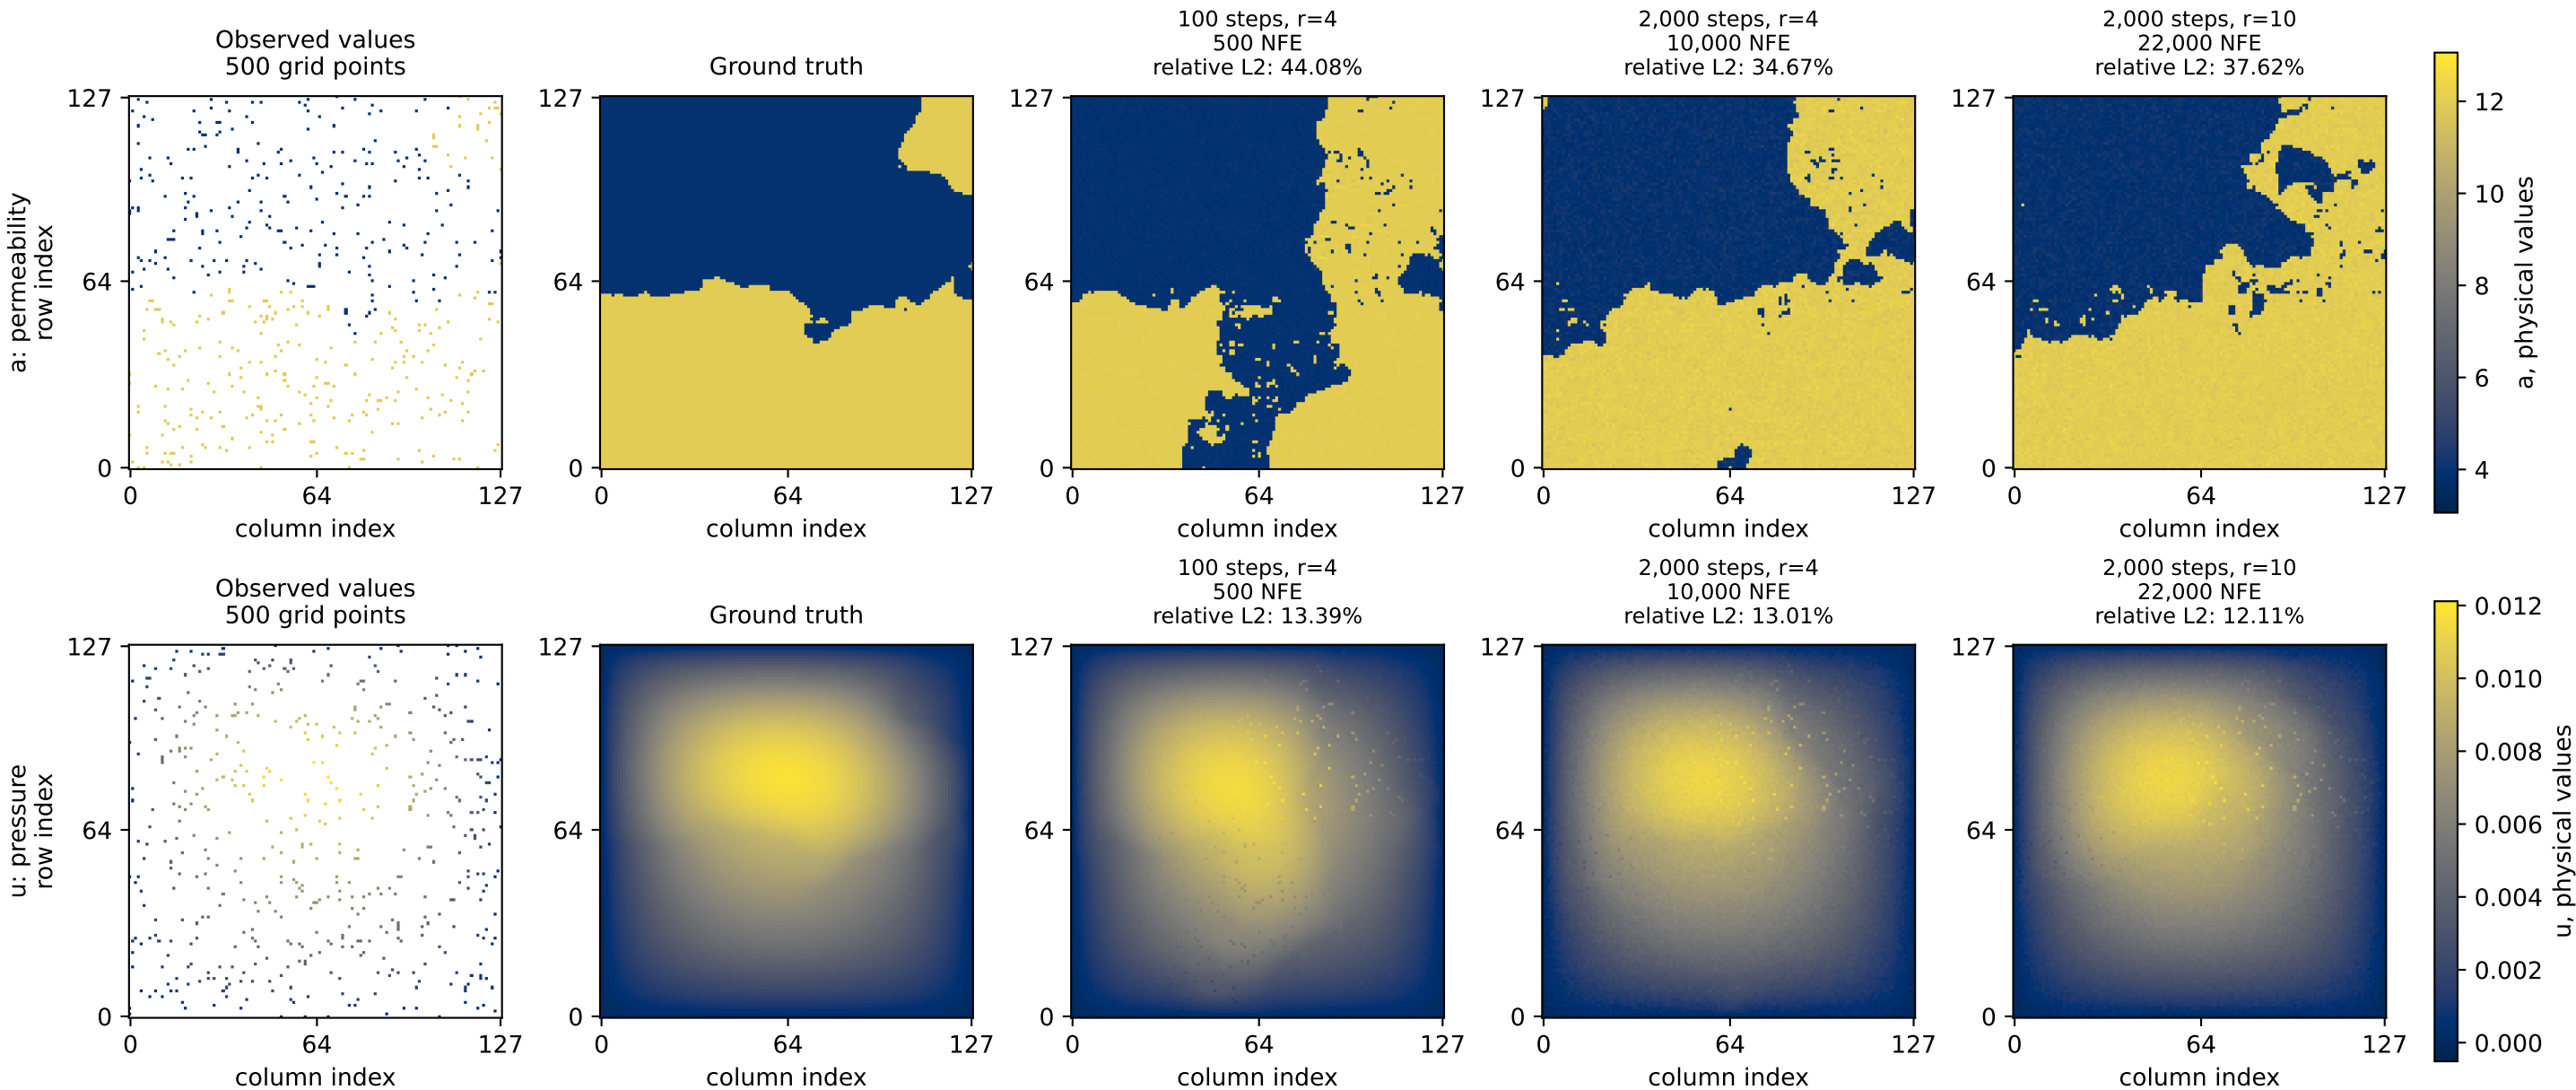

Same 8 calibration cases, seed and observations across configurations. One shared color scale per field across all pages; no image interpolation.
 RePaint r is the number of extra visits. This is an exploratory diagnostic, not a formal-main result.

Darcy / ID calibration / Sparse joint reconstruction / sample 1004

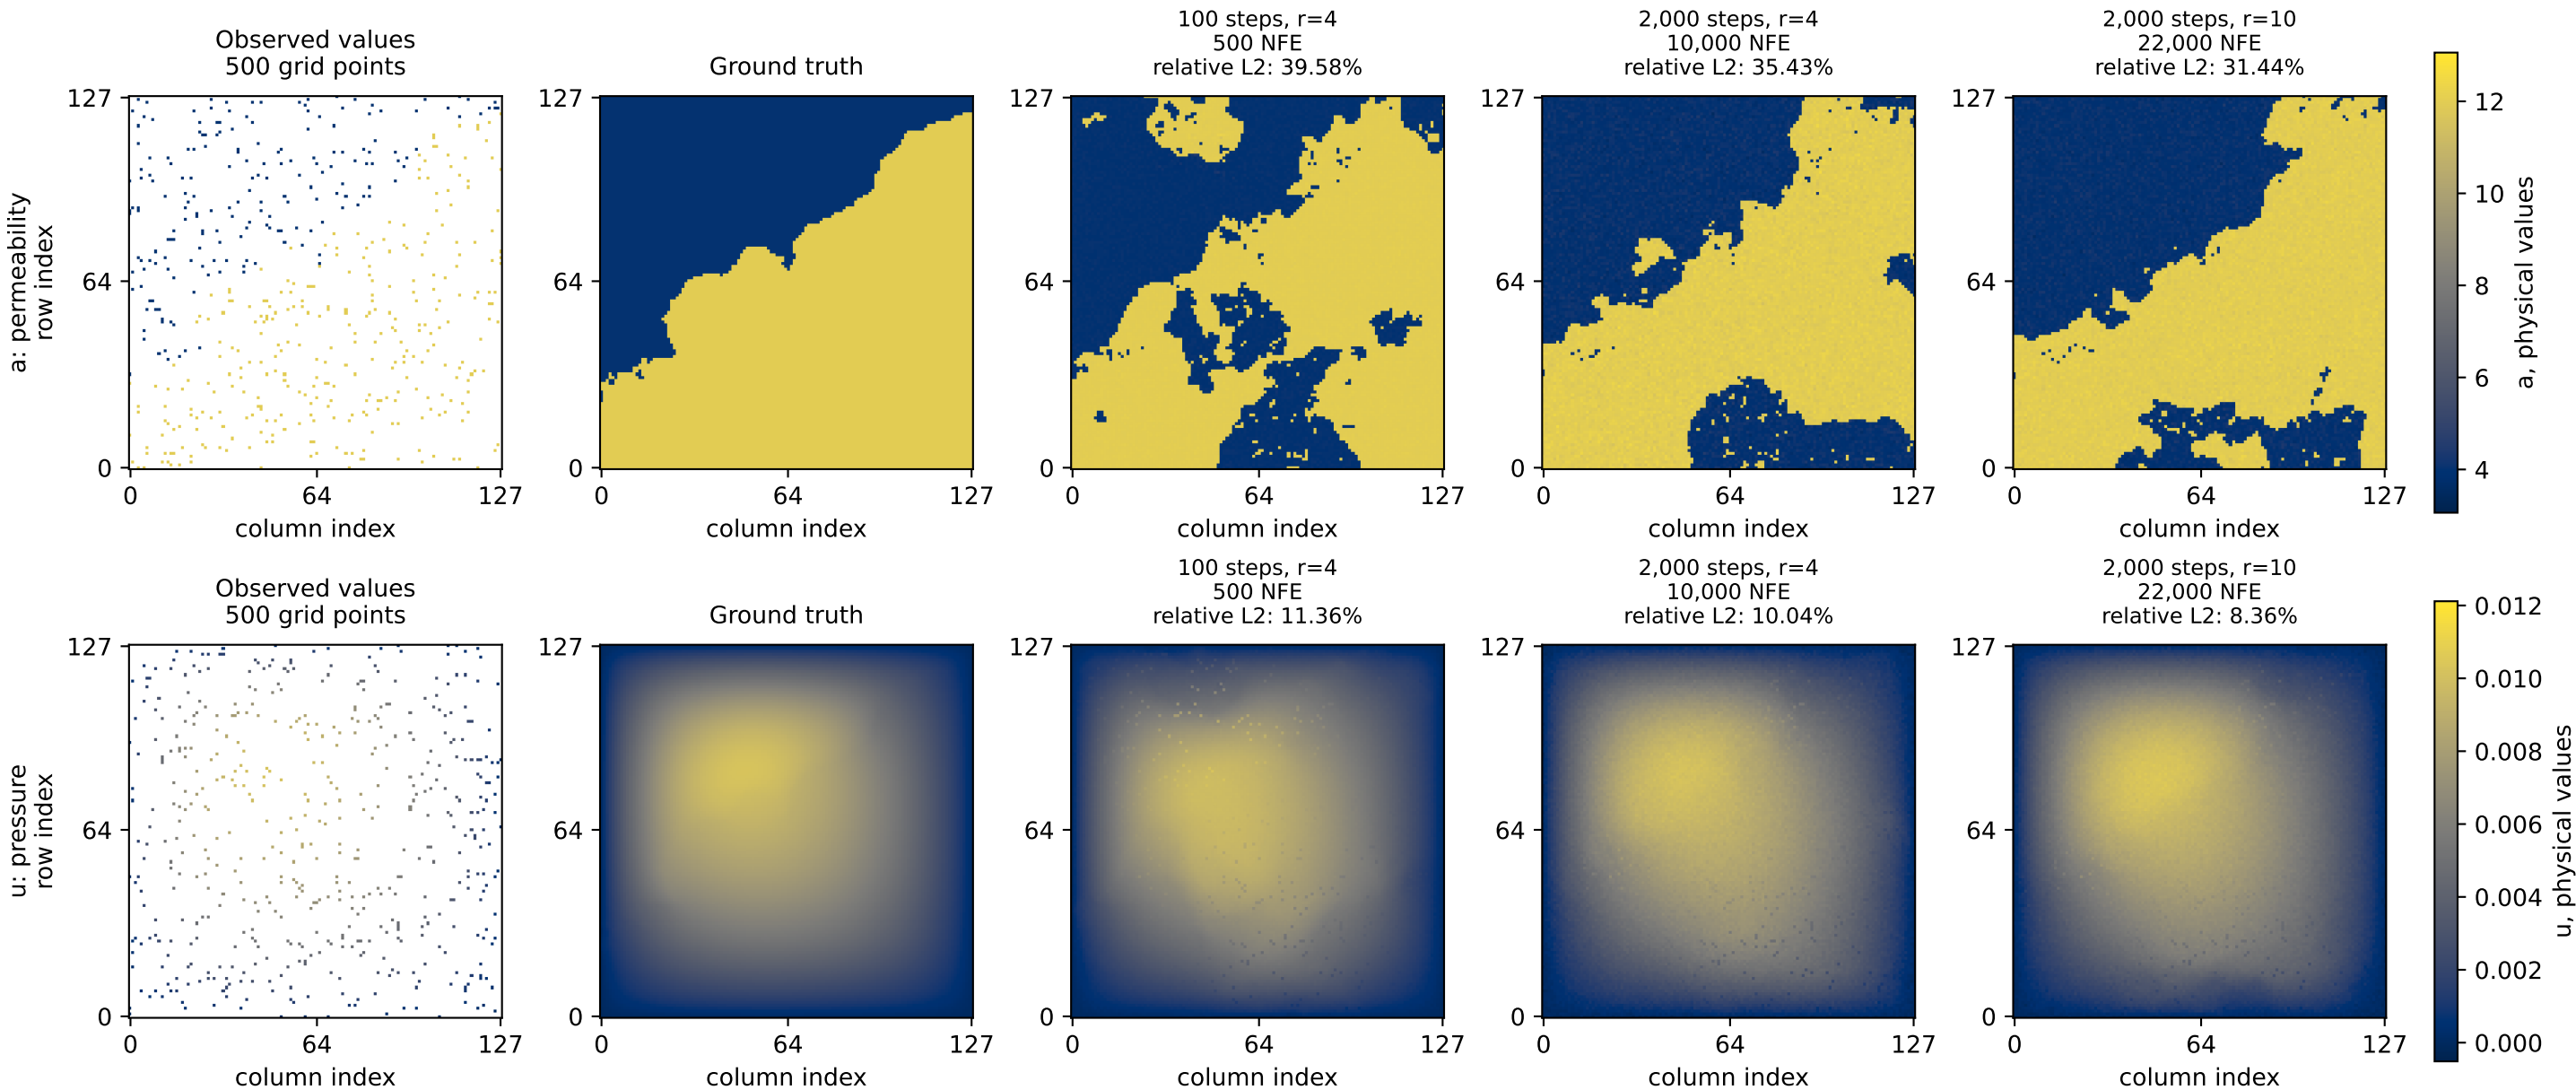

Same 8 calibration cases, seed and observations across configurations. One shared color scale per field across all pages; no image interpolation.
 RePaint r is the number of extra visits. This is an exploratory diagnostic, not a formal-main result.

Darcy / ID calibration / Sparse joint reconstruction / sample 1005

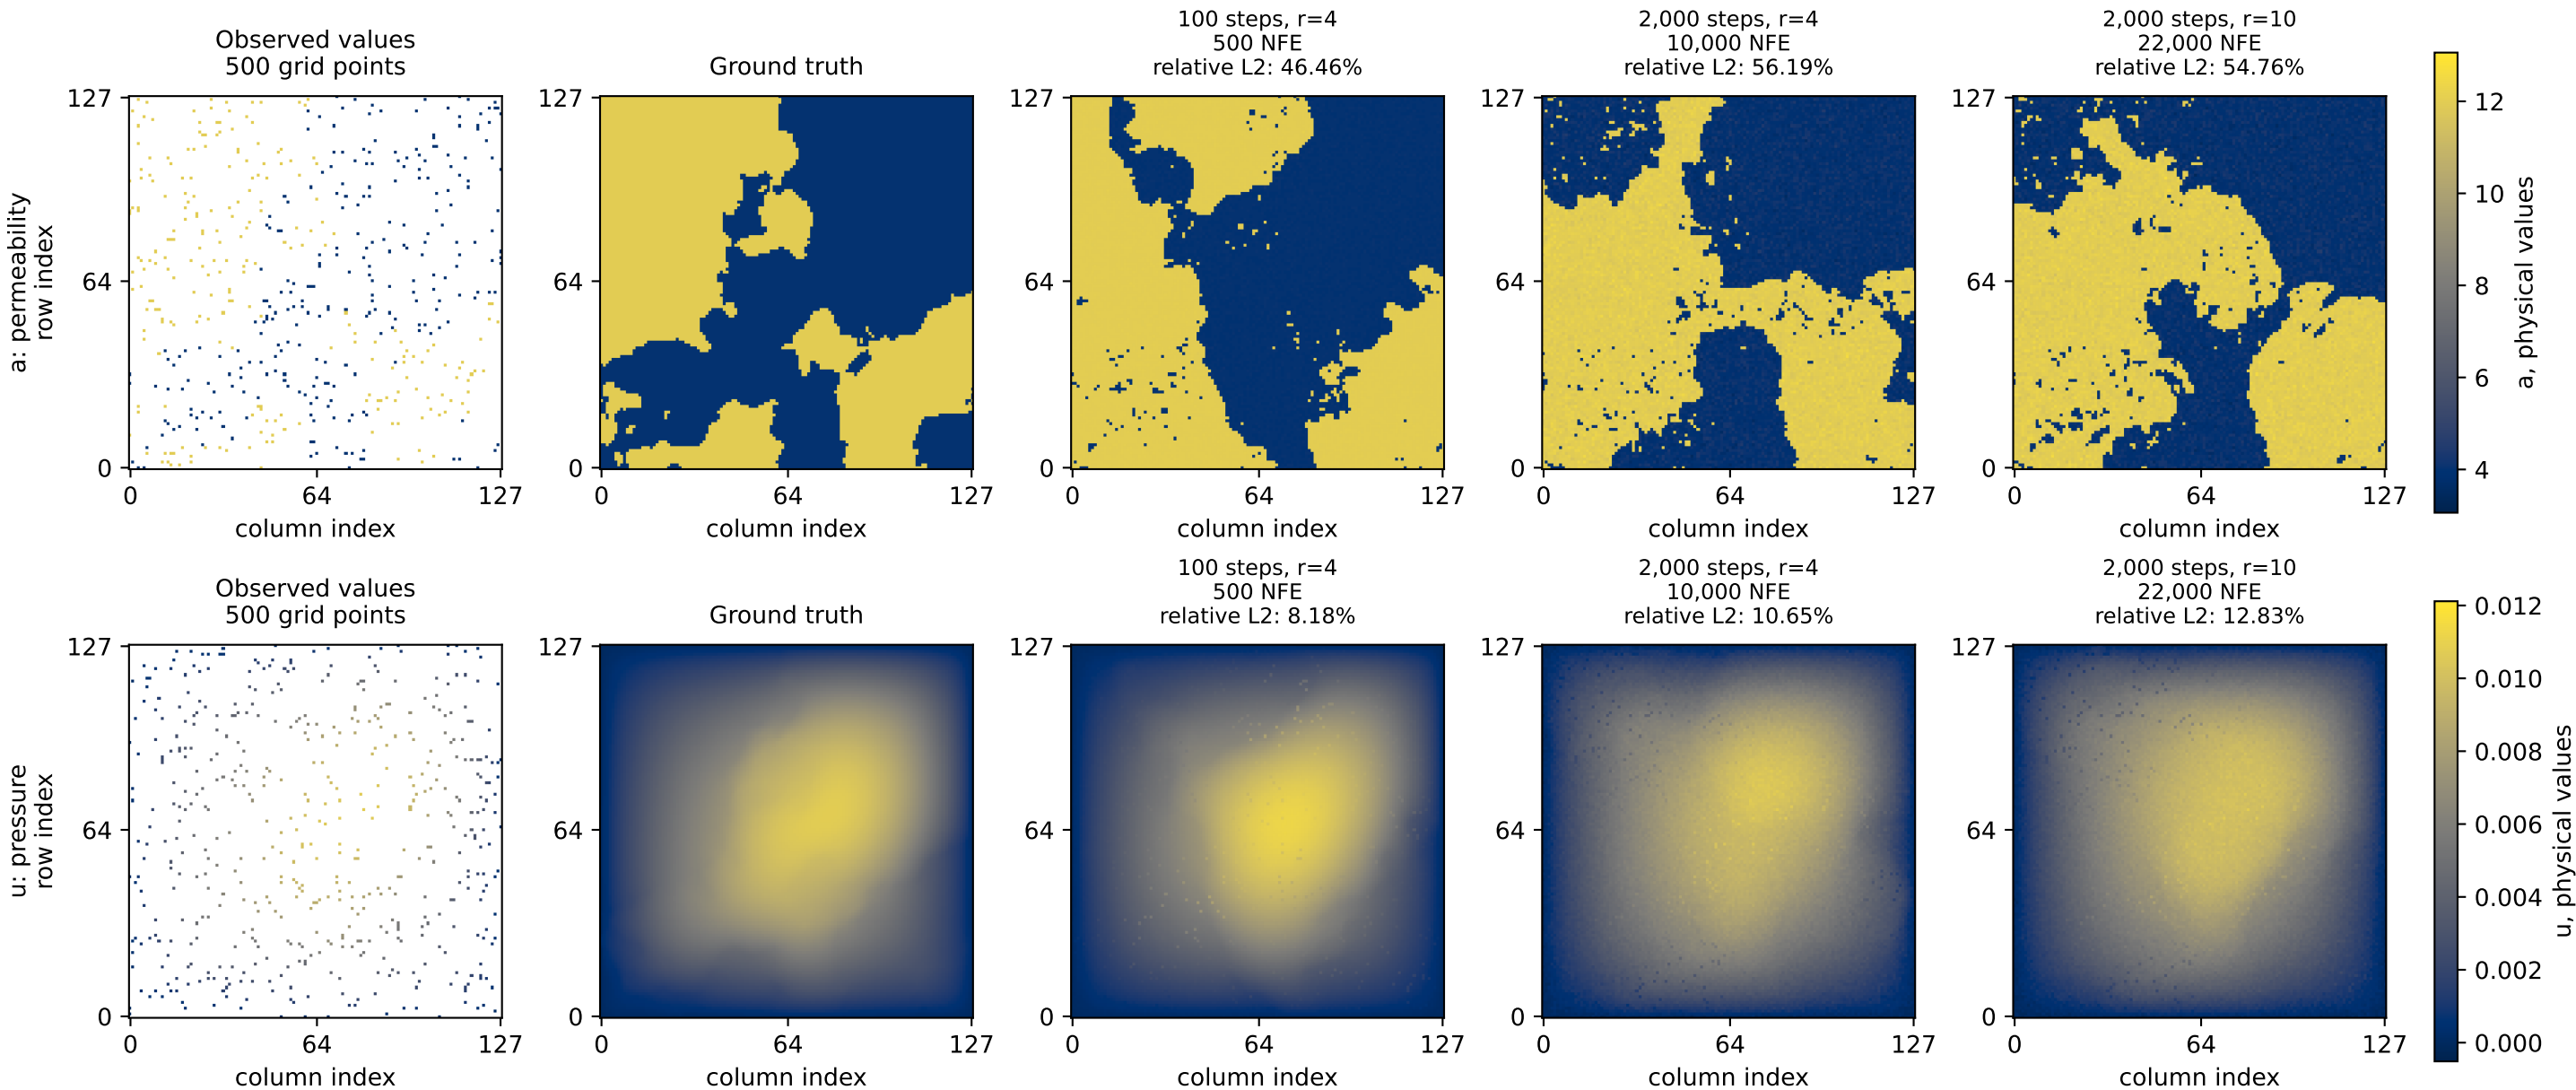

Same 8 calibration cases, seed and observations across configurations. One shared color scale per field across all pages; no image interpolation.
 RePaint r is the number of extra visits. This is an exploratory diagnostic, not a formal-main result.

Darcy / ID calibration / Sparse joint reconstruction / sample 1006

Same 8 calibration cases, seed and observations across configurations. One shared color scale per field across all pages; no image interpolation.
 RePaint r is the number of extra visits. This is an exploratory diagnostic, not a formal-main result.

Darcy / ID calibration / Sparse joint reconstruction / sample 1007

Same 8 calibration cases, seed and observations across configurations. One shared color scale per field across all pages; no image interpolation.
RePaint r is the number of extra visits. This is an exploratory diagnostic, not a formal-main result.
